Thread: [elixir's Crypter Help Desk | TV/Join.Me Support AAA+ | Need Crypter Help or Setup?](#)

?lixir - November 15, 2014, 9:16 pm

Description

I'm offering a free support help desk for encryption software. I will answer your questions to the best of my ability and help you with issues you may have. Also, I can give advice as to what crypter you need and set it up for you.

Post below while following the correct layout.FAQWhat is the best crypter? ([Click to View](#))

There isn't a crypter that I would consider "the best". A crypter that you need would be based on price and what you're doing.

Where can i get a free crypter? ([Click to View](#))

Free crypters are not the best, but may have lower detections than the software you're using. I do not endorse the listed software.Use at your own risk.

Here is a list of free crypters:

[\[FREE\]releasing 9+ CRYPTERS for free\[FREE\]](#)

[xPro Crypter \[Free | FUD | Auto Updates | No dependance\]](#)

[\[FREE\] | x - Crypter | FUD 0/39 | Scantime + Runtime | Persistence | x32/x64](#)

[\[FREE\] WarpBrothers Crypter V2.0 \[Beta V0.1\] DAILY REFUD!](#)

[Digital Crypter Public FUD Scantime and Runtime \(0/34\) No Dependencies \[Free\]](#)

[\[FUD\] \[JAVA CRYPTER\] JarProtector 1.1.1 \[Free\] \[Java 1.5\] \[3 Stubs\] \[Open source\]](#)

How do i make a crypter? ([Click to View](#))

It takes a lot of discipline, programming, and knowledge of inner workings of Operating Systems. Do not ask me.

Common crypter features and their explanation. ([Click to View](#))

Scantime: The output(stub) is FUD only when scanned by an anti-virus or anti-malware application.

Runtime: The output(stub) is FUD at runtime and will execute undetected.

Hidden Install: When installed on the system, the user cannot detect the startup application from [MSCONFIG](#).

Compression: Smaller output after encryption. (e.g [UPX/GZipStream](#))

Antis: Anti-VM, Anti-VT, Anti-SB, means "anti-Whatever The Acronym". Self explanatory, really.

Icon Changer: Changes the icon to the icon you specify.

File Pumper/Binder/Cloner: A pumper will add size to the output, binder will bind files together and either execute them in memory or drop them, cloner will clone a file you want to appear to be.

Proactive Bypass: The stub will bypass emulation or sandbox environments from anti-virus/anti-malware applications. Basicly FUD Runtime.

Persistence: If the output/stub's process is killed, it will come back. Or if the output/stub's install key/method is compromised, it will reinstall.

File Melt: The application will self-delete upon execution. So it "melts".

Injection/RunPE: On Runtime the output/stub will decrypt the payload in memory and inject into another compatible process. Please note that you cannot inject [managed](#) into [unmanaged](#). Or a x86 process into a x64 process.

Extension Spoof: This uses an unicode "left to right" or "right to left" exploit in the file name. It does not actually change the extension at all. Read this:

<http://www.exploit-db.com/wp-content/themes/exploit/docs/11381.pdf>

11/16/2014 - Added free crypter list.

11/15/2014 - Initial post.

?O?AL€™ - November 16, 2014, 11:47 am

Thi guy is a very nice guy! You can trust him!!

bozboz - November 16, 2014, 12:06 pm

Thanks. I got some encryption examples and it helped me to understand how crypters work.

House M.D™ - November 16, 2014, 2:14 pm

Hey im gonna try to explain this with the best of my ability with my poor english

So i been recently trying to use dark comet i succesfully have set it up but now im looking at encrypting it i have this 1 tool by the name of galaxy crypter (only free good one i know) and i dont know any good injection settings i have no knowledge in encrypting and i was wonder if you can explain some of the injection methods and what you recommend

?lixir - November 16, 2014, 2:19 pm

I made a list of free crypters above you can try. I'm not familiar with "Galaxy Crypter". If it has an option to inject into the default browser, use that option. If this does not help, add me on skype :-)

House M.D™ - November 16, 2014, 3:33 pm

Thank you you were very informative and helping

Vghworld - November 16, 2014, 7:15 pm

Would you mind assisting me in finding FUD icons? Thanks :)

?lixir - November 16, 2014, 7:24 pm

(Nov 16, 2014 08:15 PM)Vghworld Wrote: [\[CITE\]](#) Would you mind assisting me in finding FUD icons?
Thanks :)
Sure! What type of icon do you want?

Vghworld - November 16, 2014, 7:50 pm

(Nov 16, 2014 08:24 PM)?lixir Wrote: [\[CITE\]](#) Sure! What type of icon do you want? I was looking for JPG or PNG possibly even txt?

NoMemes - November 16, 2014, 8:16 pm

Is their an advantage of having a crypter that is coded in C++ than one that is coded in .net?

?lixir - November 16, 2014, 8:20 pm

(Nov 16, 2014 09:16 PM)BigHecks Wrote: [\[CITE\]](#) Is their an advantage of having a crypter that is coded in C++ than one that is coded in .net?

It depends on what you are doing. If you are targeting old windows machines that do no support .net, or if you going after big targets, I would use a native crypter. I would use a .net crypter for general uses.

House M.D™ - November 18, 2014, 7:52 pm

Hey so recently i bought a 35\$ crypter and using dark comet but some of the options i dont know what to put

For runPE what would i put vbc, applaunch, csc, itself ect..

and for install folder do i do appdata or temp

?lixir - November 22, 2014, 7:35 am

and for install folder do i do appdata or temp

Since darkcomet is native(unmanaged) you can inject it into almost anything. So any should work, but i would use vbc to bypass some proactives. For the installation, appdata works fine.

11/15/2014 - Initial post.

I vouch for you right know you are very help full I really needed a free crypter cuss I am only 15 and have no money thanks!

?lixir - December 4, 2014, 12:40 pm

You're welcome, but you didn't have to quote my whole thread mate.

alex1122 - December 5, 2014, 1:02 pm

Write me your contact please can't see here

?lixir - December 6, 2014, 6:12 am

I've sent you a PM mate. If anyone else can't view my skype contact, just shoot me a PM!

TheLegendaryBeast - December 6, 2014, 11:28 pm

Added you on Skype! Need to ask a favour from you so add me ASAP! :)

?lixir - December 7, 2014, 7:05 am

I'm online, i didn't receive a request on skype.

badboy123101 - December 7, 2014, 7:12 am

Name of crypter: I am making my own crypter

The Issue/Question: I was wondering if you could help me refud the stub I am getting kinda pissed because every time i do it I get one detection.

?lixir - December 7, 2014, 7:22 am

?lixir - December 7, 2014, 6:04 pm

I added you, so just respond when you can.

albabalogs - January 25, 2015, 7:39 am

If you are still offering support pls Pm me your skype.

Thanks

Energy1218 - April 22, 2015, 7:23 pm

Nice crypter Would be happy if more people made a free one!
