Thread: [Removing Watermarks!](#)

Achievement Hunter - November 15, 2014, 3:48 am

Step 1: Open the photo with a watermark in Inpaint.

Step 2: Use the Marker tool to select a watermark area.

Switch to the Marker tool on the toolbar and select the watermark area. Note that you can adjust the precise size of the marker for fine selection. You can also apply the Magic Wand tool to select a watermark area with one click – this works best with one-color opaque watermarks or logos.

Step 3: Run the restoration process.

Finally, run the restoration process by clicking the 'Erase' button. Inpaint will process the image and will remove the watermark from it.

I never really trusted this program, seeing you can get the same outcome in photoshop with a little extra work its not really worth it for me, nice share though, i hope this will help some people.

Horrible tutorial. I'm against this every bit, you should never remove a watermark, it is there for a reason.

Watermarks are there for a reason. How would you feel if someone removed the watermark on a logo you've worked hard to create for a huge price?

The tutorial is good, I agree, but I don't support doing it.

Maxipad - April 2, 2015, 12:42 pm

I agree with Alex but thanks for sharing.
