Hey guys, saw a tool on here that basically scrapes urls for a given google dork, but it doesn't seem to be active anymore so I made my own real quick.

Uhhh.. Seems like a nice tool, but can you tell me what to do with it? o.O

I'm pretty lost :P

So this goes through all pages for a query?

Also how have you addressed googles captcha lockout for spam searching?

Nice share nonetheless.
