Use your keylogger program to build your stub, I recommend buying a crypter to make it undetectable by anti-virus (FUD), then send it to your victim.

You can also bind it with an image and spoof the extension and send it as a photo.

I don't encourage blackhat activity but this is the way you do it.

Hey OP! Never Expect someone will do any thing for u for free except if u will contribute some to the forum!

i have no offense! i suggest u to search about rat spreading tips and methods..

that's the fact, you will need a good crypter or you go for binding

blackm16 - *March 17, 2015, 12:51 pm*

you can buy a good crypter very cheep the forum is full of them
