Thread: [Custom MessageBox Example](#)

Only3 - November 18, 2014, 11:31 am

i saw thread about it and remember i have few examples i made
but then been lazy to search it and write another one

?

Cornflower Blue ???-?— - November 18, 2014, 11:40 am

PHP Code

```
<?php
Class MessageBox
Inherits Form
Private Msg As String
WithEvents Btn As New Button With {.Text = "OK", .Location = New Point(Width - 100, 80)}
Sub New()
Size = New Size(300, 150)
MinimizeBox = False : MaximizeBox = False
FormBorderStyle = FormBorderStyle.FixedDialog
StartPosition = FormStartPosition.CenterParent
AddHandler Btn.Click, Sub() DialogResult = DialogResult.OK
Controls.Add(Btn)
End Sub
Public Overloads Shared Function Show(Title As String, Message As String)
Return New MessageBox() With {.Text = Title, .Msg = Message}..ShowDialog()
End Function
Protected Overrides Sub OnPaint(e As PaintEventArgs)
e.Graphics.FillRectangle(Brushes.White, New Rectangle(0, 0, ClientRectangle.Width, 70))
e.Graphics.DrawIcon(SystemIcons.Information, 10, 15)
e.Graphics.DrawString(Msg, New Font("Segoe UI", 12), Brushes.Blue, New Rectangle(50, 0,
Width - 20, 70), New
StringFormat with {.LineAlignment = StringAlignment.Center})
MyBase.OnPaint(e)
End Sub
End Class
```

Fuck yo' image.

You can remove the image, my post with the raw code is still there.

Also it is right here: <https://i.imgur.com/2ZbKt5a.png>

AEDEAD - November 19, 2014, 1:32 pm

I fixed the code

Code Class MessageBox

Inherits Form

Private Msg As String

WithEvents Btn As New Button With {.Text = "OK", .Location = New Point(Width - 100, 80)}

Sub New()

Size = New Size(300, 150)

MinimizeBox = False : MaximizeBox = False

FormBorderStyle = FormBorderStyle.FixedDialog

StartPosition = FormStartPosition.CenterParent

AddHandler Btn.Click, Sub() DialogResult = DialogResult.OK

Controls.Add(Btn)

End Sub

Public Overloads Shared Function Show(ByVal Title As String, ByVal Message As String)

Return New MessageBox() With {.Text = Title, .Msg = Message}.ShowDialog()

End Function

Protected Overrides Sub onPaint(ByVal e As PaintEventArgs)

e.Graphics.FillRectangle(Brushes.White, New Rectangle(0, 0, ClientRectangle.Width, 70))

e.Graphics.DrawIcon(SystemIcons.Information, 10, 15)

e.Graphics.DrawString(Msg, New Font("Segoe UI", 12), Brushes.Blue, New Rectangle(50, 0,

Width - 20, 70), New StringFormat With {.LineAlignment = StringAlignment.Center})

MyBase.OnPaint(e)

End Sub

End Class

So,

MessageBox.Text = "Fuck"

MessageBox.ShowDialog()

Yet

Messagebox.Msg is not acceptable because it's private blah blah.

snip

Yet

Messagebox.Msg is not acceptable because it's private blah blah.

How much did you really fix if you're unsure why private variables can't be accessed publicly?
