Subject says it all but I'll explain. I want to use the actual music app that came with ios. How do I download music from my ipod. into my itunes

or is there any tweak that will make itunes music free?

MewSeek. It's \$9.99 from the official repo but you can find it free.

That's the one I use. It's super convenient and has all the information.

you can use grooveshark with grooveshark enhancer. you can save any song in grooveshark app then transfer it to itunes or to music app. you need to have gremlin installed as well. it makes you be able to transfer the music into your library.

The only problem with Linktunes is that you can't download full albums :\ So you have to download 1 by 1..
