i need "Command Prompt" code can -standby- windows.

?

}Kernel32 - January 17, 2009, 11:24 am

Erm in command prompt it will be hard ? :s

Proxy - January 17, 2009, 11:28 am

Er... what?

Berty - January 17, 2009, 3:13 pm

Oh no wait I just worked out what He said, he want's to suspend(like temp shut down) the computer from the command prompt

n|k|t0 - January 17, 2009, 3:33 pm

Hi I'm not sure if it is this what you meant but with

Code %windir%\System32\rundll32.exe powrprof.dll,SetSuspendState
you can put a computer into suspend or hibernation. Depends on the configuration of the system.
you can check it by typing "Powercfg.cpl" in the command prompt or run menu. Then a configuration window will pop up.

Hope that was helpful.

demosthenes2k8 - January 18, 2009, 7:08 pm

Code shutdown /h /fGotten in 5 seconds from ss64.com

It's the CMD bible at my school

kriminaali - January 18, 2009, 8:40 pm

nice find demosthenes2k8

demosthenes2k8 - January 19, 2009, 6:22 am

Why thank you!

I've used it for years...when I get bored in the library at my school, I just sit there chucking random stuff from the list into a CMD (using runas, of course!)
