Thread: [AA Phone Thread](#)

**Azsry** - November 24, 2014, 5:09 am

Post your current phone setup, rice or no rice. There's a thread for people to post their amazeballs-minimal-bbLean-\*nix mash thingos, but not really one for phones.

I'll start off with mine. I used to have a matching lock screen with a flower UCCW widget, but after flashing another ROM onto my phone I haven't gotten around to it:

**Dragon.** - November 24, 2014, 5:11 am

That looks sick! I haven't really thought about customizing my phone yet. Will do it over break. :P

**Lyrlei** - November 24, 2014, 6:08 am

Wow that looks awesome- but i'd never probably do it.. I care because people touch my phone. :(

**zyvox** - November 24, 2014, 7:02 am

Bet you were expecting something lewd

Probably gonna get the Nexus 6 anytime soon although I am kind of in doubt of its size

.

The Nexus 6 is made by Motorola, so it has some nice features like an AMOLED screen and Motorola's proprietary Active Display function to save battery life. People have ported it to other phones unofficially and I had the opportunity to try it on my Galaxy S2, which also fronted a 'Super AMOLED' screen. My brother has a Nexus 5, though, and he loves it as well. It's made by LG, so

whether you get a 5 or 6 is purely up to preference.

Also, I really like the look of Lollipop, but it isn't out yet for the OnePlus One :(

I actually rooted mine and installed the Official ROM. I think there is a ported ROM for the OnePlus One

**Fox** - November 24, 2014, 4:22 pm

As expected, I have a regular home screen with a wallpaper of Flandre.

I'm still using a Samsung Galaxy S III.

**Ang?I** - November 24, 2014, 5:33 pm

Nothing special.

Spoiler [\(Click to View\)](#)

Samsung Galaxy S5.

There are Nightly builds for the OnePlus One, but for some reason it didn't install the su binary, even when flashing the SuperSU zip.

**tweety** - November 30, 2014, 1:07 pm

I forgot what custom ROM I'm using lol, I'll try find out maybe.

EDIT: I'm using this - <http://forum.xda-developers.com/showthread.php?t=2557353>

It's the Google Edition Android ROM 4.4.4

**HypnoToad123** - December 1, 2014, 11:47 am

would you need to root do to this? i really love the idea and your example is really beautiful :)  
i already have a sony z1 C960 that is rooted, could anyone recommend the best app for customizing like this?

**Azsry** - December 1, 2014, 1:18 pm

Nope, root is completely optional. All you need to do to get something like mine is a custom launcher from the Play Store, such as Apex or Nova (I use Nova), and set the icon grid to 12x12 with sub-grid positioning enabled. The icons you see on my homescreen are actually part of the wallpaper and I use blank icons to make the appropriate action occur when I press on that section of the wallpaper.

Oh, how do you make them blank? I'll be getting my Android phone hopefully by the 11th so I'd probably like to do something like this.

Also how restrictive is the grid? Would something like 4x4 placement work?

**Conan'** - December 1, 2014, 3:27 pm

This was on my old S3, haven't bothered to make the wallpaper in 1080p for my OPO yet ;-;

Are you using the beta zip?

I was using the most recent Nightly at the time, but I'm fine with just using CM 11S until CM 12 is properly released.

In Nova Launcher, you can tap and hold on an icon to change its label and icon. Either make a blank .png in Photoshop or just find one on the internet, then replace the icon with the blank you just made/found.

The size of the grid depends on the screen size of your phone as well as the DPI. 4x4 is standard, but not preferable for custom setups like mine since you can't fine-tune the position of the blanks. 12x12 is the max Nova supports, and sub-grid positioning allows you to place the blanks in between the grid lines as well.

Oh no I meant 4x4 as in 4x4 pixels (really really small I guess) for exactly that; positioning the blank icons exactly above the wallpaper icons. Was just wondering what the lowest you could go was, I guess I'll be making my own wallpaper (or inserting the icons myself) so I'd be more free if you were able to go that small instead of having to set them in a set 12x12 grid relative to your screen for example.

I guess I'll figure it out when I get it though

**odunamoney** - December 2, 2014, 2:28 pm

interesting ca some educate me based on this?

**Azsry** - December 2, 2014, 11:33 pm

As far as I know, the size of individual icons depends on the DPI of your phone, but the blank image

itself can go down to 1x1 px.
