Thread: [Need Help On Email Sender Code Error :\(](#)

Teruz14 - November 26, 2014, 9:56 am

Hello hackforums ?

I'm trying to make a email sender for people that need help can send me a quick email

This is how the project looks

- <https://imgur.com/uX7vBSR>

This is my code :

Quote: Imports System.Net.Mail

Public Class Sendemail

Private Sub Button1_Click(sender As Object, e As EventArgs) Handles Button1.Click

Dim Mail As New MailMessage

Mail.Subject = "saintteruz@gmail.com"

Mail.To.Add(TextBox2.Text)

Mail.From = New MailAddress (TextBox2.Text)

Mail.Body = TextBox1.Text

Dim SMTP As New SmtpClient ("smtp.gmail.com")

SMTP.EnableSsl = True

SMTP.Credentials = New System.Net.NetworkCredential (TextBox2.Text, TextBox3.Text)

SMTP.Port = 587

SMTP.Send(Mail)

Me.Close()

End Sub

End Class

I don't know what im doing wrong when i try send a email it gives me this error

Change the port to 465, as you're using SSL rather than TLS.

Well i have something simillar to this but it is set to my timer1 i see you have this code bound to your button 1 What you have to do is copy and paste this code i put into your timer1

```
Quote:Dim mymailmessage As New MailMessage
    mymailmessage.From = New MailAddress(TextBox1.Text)
    mymailmessage.To.Add(TextBox5.Text)
    mymailmessage.Subject = (TextBox4.Text)
    mymailmessage.Body = (TextBox3.Text)
Try
    Dim smtpserver As New SmtpClient("Smtp.Gmail.com")
    smtpserver.Port = 587
    smtpserver.Credentials = New System.Net.NetworkCredential(TextBox1.Text, TextBox2.Text)
    smtpserver.EnableSsl = True
    smtpserver.Send(mymailmessage)
Catch ex As Exception
    End Try
End Sub
```

Replace the textboxes that i have with the ones that you use (i might have textbox5.text when you use textbox3.text)

Then for your button1 you put timer1.start

I copied that code straight from my spammer, so I hope i helped you out. Like i said that dim mailmessage stuff has to go into your timer not the button. If you need any more help i may be able to help you via skype if you need it. For now, good luck.

The error is explicit, the server could not authenticate you.

One of two happened:

You set the credentials wrong.

Or the account doesn't allow "insecure apps"

<https://www.google.com/settings/security/lesssecureapps>

Edit: Your code works with me.
