Thread: [\[RELEASE\] MustWatch 1.0 | Must Watch PHP Page before accesing another \(SESSIONS\)](#)

ConsoleTVs - November 26, 2014, 11:49 am

Hello, in this post I'll be adding the files of my little project

The main objective is monitorize, \$\$, so in fact here is what it does:

- 1-The user wants to acces index.php where we do have our content.
- 2-The user gets redirected to must_watch.php (a page with ads or any content)
- 3-After the given time has passed, the user gets redirected again to index.php

Pros:

- It cannot be skipped by typing index.php in the URL, in fact it's because a code is generated and saved into the session, and only if the session is the same as the code given in the URL the user can see the content

DOWNLOAD:

https://mega.co.nz/#!/phsUIQAQ!MuYrdkGNbjqkc_X65cm98wM13quUOjt8UJzsbb6ilSQ

HOW TO USE:

Extract the content

Edit the must_watch.php and change the time value (follow instructions inside)

Add the HTML page replacing the demo HTML and whaalaaa!

SECURED!

I have no use for this. Just wanna see the code.

Can you please create a repo on github? Easier to see :)

DarkSec - November 26, 2014, 2:21 pm

hmm this can come in use... i had my own version of this but it was ghetto AF

ConsoleTVs - November 27, 2014, 1:07 am

Acualy, Its a simple php code I've made for self pruposes, but i wanted to share it because some website owners want to force users to look at advertisments before accesing the page

If you guys want more, I can do a version with administration panel and stuff, that will only require a mysql database.
