Thread: [DDOS ing](#)

keksimus maximus - November 26, 2014, 8:05 pm

hi,
i am new here
i am interested in taking down sites with ddos attacks
but there is one issue
i dont know how to do this
i cant pay for stressers
how do i ddos
i got LOIC and HOIC if that helps, pm me or post here
?

Talent . - November 26, 2014, 8:17 pm

Look in the server stress testing section and purchase something.

Don't even bother with Loic...

ARsniper7 - November 26, 2014, 8:18 pm

If you want to hit a site you would either buy a good stresser or setup a botnet both cost money. It isnt easy to ddos if you dont pay

You do not want to take sites down with ddos attacks. You want to delete LOIC and HOIC and learn a programming language instead. PM me if you need help in taking my advice.

P.S. You're welcome

Supreme??????? - November 26, 2014, 9:15 pm

I highly suggest you stay away from programs such as LOIC. They won't get you anywhere.

Cabo - November 26, 2014, 9:15 pm

Ehh, your first mistake was downloading LOIC & HOIC. You'll either need to buy a stresser or create one yourself if you want quality.

Shadow Reign - November 26, 2014, 9:27 pm

LOIC and HOIC are for DOS attacks which are useless. You dont want to DOS, you want to DDOS, so get rid of those useless tools and I suggest doing a full system scan as those tools are usually heavily backdoored.

Now the first step is downloading a RAT. Use Dark Comet.

Encrypt the RAT with a real paid crypter, not the fake free junk.

Bind it to a legit program and upload it to a site for people to download.

Now get a worm. Ghost Worm is a decent free worm with the feature we want. Why do we want a worm? To help increase your spreading! Make sure to check the "download file option" and put a link to your RAT.

Now encrypt the worm, bind it and spread it a bit.

Now, we've all these "zombies", but why?

Now you buy booter, upload it to all your zombies using Dark Comets file upload feature. Start the booters, pick your target and BAM! You successfully booted someone.

Welcome to the forum eden17,

Please check out the help documents.

<https://hackforums.net/misc.php?action=help>

You will find a lot of great information there!

Also check out this guide, written by one of our members.

Good luck with your DDoS questions.

Above me the users suggested you stay away from LOIC and HOIC, i completely agree.

0101007 - November 26, 2014, 10:05 pm

well i was using hostbooter for ddos sites but don't know now its working or not ..

that is where you are wrong, they will get you into a special place called jail. :)

The Listener - November 28, 2014, 4:56 pm

Try out Tor's Hammer it's really good

CryptoGod - November 28, 2014, 6:26 pm

First; You're not going to want to use a DDoS attack on the website you're trying to take down.

You're gonna want to learn a programming language, specifically, PHP. Knowing PHP will help. Allot!

Second; You're gonna want to write a program(a very simple program) which will trace the IP address of the website, and send attacks to the IP of the website.

This will be simple, write some code, save it, BAM you're done(this part of it anyways)

Thirdly, You're gonna want to hide YOUR ip address. So that they can't trace the attack back to you. This is easy, just find a proxy ip online, assign it to your internet, and there you go, you're somewhere else, with a random ip address!

I hope you learned something here today!
Cheers, CryptoGod ?

Refute - *November 28, 2014, 6:30 pm*

Just buy something from the server stress testing forum on here.
