Thread: [\[Service Offer\] Free hosting \[SHUTTING DOWN\]](#)

Squito - November 27, 2014, 2:30 pm

HF Hosting after 3 years is closing its gates.

As of the 11th of March the server behind my free hosting will serve its last day.

If you are an owner of a website on my server
you can use your FTP and phpMyAdmin access
to backup your website and move it somewhere else.

PS: if you can't backup your site until then... you're screwed.

M1L3NK0 - November 27, 2014, 7:01 pm

I'm interesting in hosting a forum, do you think you could help with that? I don't have a domain, though.

anmolpokhrel - November 28, 2014, 2:41 am

Hey are you still offering this deal? If so could you set up hosting for my domain. It is
http://www.odhrian.com (remove spaces)
I bought the domain with register365

Squito - January 3, 2015, 6:05 pm

Yes, my offer is still valid to anyone who is not planning to use it for blackhat activities. I'm creating your accounts (FTP and database) right now, I'll PM you when ready.

He has already said he's not going to buy cPanel nor is he going to install a nulled version of it.

Squito - January 26, 2015, 9:56 am

@Fleckens: yes, my offer is still available to anyone who can abide the rules I wrote in the opening post.

@alma143: I do not have cPanel. Like I posted in the OP I can only offer FTP access and phpMyAdmin. There are plenty of youtube videos on both FTP clients (like Total Commander or FileZilla, etc) and phpMyAdmin. If you have domain(s and subdomains) you just send me a list and I set things up, all you have to do is point your domian(s and subdomains) to my server (create an "A

record"). If your domain(s) don't come with a DNS you can always use [namecheap's FreeDNS service](#). If one database is not enough, you need more FTP accounts, you have additional domains or any other needs you can PM me or add me on Skype and I'll sort things out as soon as I can (during work hours [8am-4pm CET] that means within 5-30 minutes). Rest of the story (the boring part): Spoiler ([Click to View](#)) cPanel is 45\$/month per dedicated server (yes, this is a full dedi, not a VPS at a company that oversells and puts you on a 1gpbs port that you share with 100 other people) and I simply can't afford it, I earn 320\$/month as a sysadmin in a hospital and the server already costs me 21.5\$/month. I don't want to risk reinstalling my whole server (or even my account at OVH) because of a nulled version that may come with a tiny little backdoor (that would allow someone to completely f**k things up). VestaCP creates an environment that is illogical (every domain and subdomain receives a separate folder structure and you have to create an FTP access/account for each) and completely different from my own structure, what I find logical. Ajenti does not support Apache, only nginx. The other free alternatives' reputations are... not convincing enough to try them.

Ishmel - January 26, 2015, 11:14 am

I would love this, but I'm just wondering how I get a domain?

(Jan 26, 2015 12:14 PM)OMC Faucet Wrote: [\[CITE\]](#) I would love this, but I'm just wondering how I get a domain? There are a few reliable domain registrars like [namecheap](#), [Godaddy](#), [network solutions](#) (my personal favourite is namecheap) or you can get a free domain from [freenom.com](#) (.cf, .ga, .gq, .ml, .tk) or I can provide a hfhosting.pw subdomain (for example omcfaucet.hfhosting.pw).

Squito - February 19, 2015, 6:42 am

I have added/installed a ticket system, since I'm not available on Skype 24/7, also some people don't want to use Skype.

Through this anyone can contact me, ask me questions, order/request my free hosting service, report any issues, etc.

I'll set up the subdomain and everything else and when I'm done (it's 11:53pm here, so probably tomorrow) I'll send you a PM (or if you PM me your email address then send you an email from admin@hfhosting.pw) with your FTP and database access information. You'll have FTP and phpMyAdmin access, there is no cPanel. After that I provide support if you run into a server issue. If you need Wordpress or other CMS installed for you I can sort it out for you.

Edit: I've set things up, now I just need to know if I should send you the informations in PM or email?

I'm still accepting requests for free hosting. No ads, no strings attached. More information [in the opening post](#).

Do you have your own domain name or do you need a subdomain?

You're still offering this hosting after two and a half years? I'm impressed and thanks for contributing. I might as well use it in future.

The previous server has been running for 577 days straight and before that I had to restart it twice, due to DoS scripts. During that 577 days the overall downtime was less than a day. Although I don't have cPanel (costs more than the server) nor any other control panel software, still you get everything you need, plus I'm checking the emails, the ticket system and PMs every day (usually several times).

New feature: if you write "/util/quota" after your domain name, you'll see how much storage space you consume and how much available you have left (stats updated once every minute). Example: example.com/util/quota

Can i scrape websites with this hosting?

TheStraa - April 24, 2017, 12:32 pm

Just registered on your website, waiting for approval now. And wondering if you are still offering that Special Offer. I was thinking about SSL certificate.

Thanks!

As long as the purpose is legitimate and you don't trigger Kimsufi's anti-scanning alert (curl_multi_exec is disabled).

First of all thanks that yu are still doing it!

Btw, does your server support FFMPEG? I want to run an instagram script (schedule video post for my own instagram account)

You're welcome.

If you mean video conversion, no. If you mean uploading a video, that's okay (as long as it's within the 250 MB limit.

Btw to everyone: the 250 MB is a hard limit, it's not possible to go over it.

If you want to handle things here please send me a PM. If you want to communicate outside HackForums feel free to open a ticket at <https://ticket.hfhosting.pw>.

(Jul 31, 2017 03:53 AM)Bromden Wrote: [\[CITE\]](#) Could you install me a Cpanel OP?

No. A legit cPanel license costs more than the server (and I won't risk using a nulled cPanel). Also I'd have to reinstall the whole server, because Debian 8 is not supported by cPanel. What would you need cPanel for?

Squito - *February 14, 2018, 2:28 pm*

HF Hosting after 3 years is closing its gates.

As of the 11th of March the server behind my free hosting will serve its last day.

If you are an owner of a website on my server
you can use your FTP and phpMyAdmin access
to backup your website and move it somewhere else.

PS: if you can't backup your site until then... you're screwed.
