Thread: [PSD to HTML](#)

p.itech - November 28, 2014, 6:29 am

I need someone to tell me how can I convert psd to html and integrate php?

Randize - November 28, 2014, 6:39 am

There's no software to do that, you need to know html, cut and slice the images you need for your site, and integrate it with php for whatever reason you have. Just hard code the html, ain't that hard to learn actually.

clark.dll - November 28, 2014, 6:40 am

You can actually get the CSS properties from Dreamweaver. But you'll still have to know the HTML and integrating PHP will take some practice too. It's not something you can just learn in a day.

there is, and adobe is already developing one this year.

@op just code it and cut the elements

i said to code it so he gets the experience, not because its bad.

useless reply

Botnet Guy - November 28, 2014, 2:54 pm

No easy way to do it bro, theres software but it doesnt work very good

ocherries - November 28, 2014, 4:00 pm

I would help you out but I'm not the best with HTML, try using Dreamweaver.

Xorex - November 28, 2014, 5:52 pm

Take a look at CSSHat, not exactly what you're looking for, though give it a try.

Russia Today - November 28, 2014, 5:56 pm

The "psd" is only an interpretation of what the coded site should look like. It can be used for reference and to take image elements from.

Get someone who knows html and css (or do it yourself it's not difficult) to create the functioning

site.
