3 hours, will give you a basic knowledge of SQL maybe. By no means will it give you complete mastery though.

If you want to learn SQL specifically for hacking, i'd recommend hacking challenges that include SQL knowledge.

I believe there was some SQL dude that got like 50+ challenges for that, you can look it up, it's easy to find I think.

There's join and sub-queries, there's table types, functions, there's operands and operators, parameters and such. It can get a bit more complicated, but not a lot. I can't give more than a day or two of time dedication to learn SQL. It's not that difficult, on par with HTML.
