Thread: [PS3 Jailbreaking Help Desk!](#)

Tenno - November 28, 2014, 2:16 pm

Hello HF!

I'm here to help you with jailbreaking your PS3! I've downgraded a few PS3's using an E3-Flasher so I know alot about it.

I can also help you with homebrew and such.

If you need help, just post your question here and I'll answer it ASAP!

PAID HQ SKYPE DOWNGRADE/JAILBREAKING SUPPORT [HERE](#)

BEFORE YOU ASK:

You can only downgrade if your PS3 has been on 3.55 before and you can only downgrade using a hardware flasher, like E3-Flasher, ProgSkeet ect ect

I will not help you with pirating games or any other illegal things, but I can help you with modding games.

My personal tips:

Spoiler ([Click to View](#)) Use Rebug. It has great features like built in QA Flag, and easily go from DEX to CEX.

If you are not modding, stay on CEX, if you are modding, switch to DEX. DEX gives you alot more features than CEX, like more mod menus and better aimbots.

Always do your research before doing anything

Always take your precautions when going online. Like spoofing your CID, cleaning your history and more.

Ask here if you're not sure about what you are doing. I will gladly help you, and so will other users.

Don't play on the newest games. Higher barrisk, almost a guaranteed ban,

Never open homebrew while online

When using an E3-Flasher, always tape a coin on the NOR chip to create pressure so it fits correctly, otherwise you would need to sand the edges of the clip so you hear the click when you put it on

Always remember to plug in the fan when running the E3-Flasher. Some people think its not a big deal since its in an open environment, but it will overheat.

Take pictures of the inside of your PS3. Take note of the wires and where they are supposed to be plugged in, and always remember the screws. When I put back my PS3, I had 3 screws left :P

Usefull post by scumbxg

Spoiler ([Click to View](#)) i to downgrade and jailbreak ps3 consoles! have done 10+ never had a brick, getting a bit slack nowadays haven't done one for a little while because i have 3 at the moment! (probably should sell them)

just read over this thread and OP knows what he is talking about and people are lucky to have the support he's giving! so thumbs up for that OP :)

I'll try answer a few things that i have read even though some have already been answered.

CEX and DEX, CEX is retail DEX is developer/debug. if your new to CFW id say go CEX because its more user friendly and then later on convert to DEX if you feel the need. (i converted straight to DEX with my first console and although it was good i just felt i couldn't use it to its potential, i ended up selling it after about 6 months and have never had DEX again.)

What i like a about CEX is that its simple you turn your ps3 on and sign in and away you go, RTM'ing is fully wireless! something i dislike is that it seems easier to get CID (console id) banned, i have been CID banned playing mw3 only and thats a game that i think they gave up on monitoring.

What i liked about DEX was more options available on RTM tools, never used anti-ban and never got CID banned in 6 months while playing Bo2 and Mw3. What i didn't like though was the fact to run TMAPi you need to be wired to your ps3 (Can be used wireless with the same program CEX uses but then theres you'r extra options with RTM tools gone, And having to do things before being able to sign in (not complicated just annoying)

I used Rebug 4.6.1 D-Rex seemed to be a decent cfw i also hear the ITA DEX cfw is good.

On CEX i stick to Rogero 4.55 cfw i have used Habib cfw but prefer Rogero.

Look for E3 flashers on aliexpress.com they ship WORLDWIDE i got my E3 limited for i think 70 or 80 Aud delivered to my house.

Cfw Ps3's can be played online they just need to be spoofed to the current Firmware, from what i remember with my first console (DEX) i needed the Rebug updater by BitsBubba aswell as a spoofer i may not be %100 correct it was a while ago

Another pro about DEX is i didn't have to spoof again until about a month after the next update came out! (Not sure why)

Getting valid NOR dumps can sometimes be a bit tricky, as the OP said put a coin or something on the back thick enough so that it holds a bit of pressure against it, You can also shave the bottom step of the edge of the off the clip to get it to sit flusher. (Its only plastic)

If you do decide to downgrade your self MAKE SURE you READ READ READ before doing it.

If you buy a Ps3 on 3.55 Ofw make sure it has the warranty sticker still on it or its probably just been downgraded (they sell for more then jail broken consoles most of the time)

If you're console is a Phat/Piano make sure you install a fan control and turn it up, like right up!! otherwise it will freeze often due to overheating or could even ylod.

I did have more to say but cant remember now its 8am and i haven't slept fm!!

if theres anything wrong in what i just said correct me otherwise happy to help out in this thread :)

Hey man!

Here's a list of downgradable/jailbreakable models.

Any slims that starts with:

CECH-20

CECH-21

CECH-25 NOTE YOUR MINIMUM FIRMWARE NEEDS TO BE 3.55 OR LOWER

Any phats that starts with:

CECHH

CECHJ

CECHK

CECHL

CECHP

To check your minimum firmware, download MinVrCheck and put it on your USB, then plug it into the right USB port on your PS3.

Then update via media storage.

So what is the point of JailBreaking your ps3 does it get you free games or something?

(Nov 29, 2014 12:17 PM)Complx Wrote: [\[CITE\]](#) So what is the point of JailBreaking your ps3 does it get you free games or something? Jailbreaking has many uses and equally many disadvantages.

The main advantages is that you can:

Mod games

Get Free Games

Play MKV media

Run other software that provide cool features!

The disadvantages is that you:

Are stuck on old firmware

Lose access to PSN and also Game Updates

No PlayStation Plus

No multiplaye

Although there are many ways you can avoid this such as getting new CIDs and also by spoofing. Or not going online and when you can use a rebug so you can play online and then disable the online features and play your pirated games!

Hope I helped! :)

Wrong. There are CFW designed to be installed on 3.55 OFW which will bring your PS3 to 4.55 while still running a CFW, such as Rebug REX. You have access to PlayStation+ and multiplayer, and you can install game updates and access PSN. Where have you been?

I'm not really much of a noob, because I have experience with a jailbroken PS3, but I just want to know what homebrew apps reduces bans.

I'm currently on 4.46.1 REX Rebug \ and I use PSNPatch and PSNinja at every startup.

So do you think those apps are good to use to reduce ban?

Yea just keep using PS Ninja/PSNPatch and the ban risk will be reduced greatly but there will always be a risk of ban.

Heya, I have experience modding etc however since I changed from firmware today (never used rebug firmwares) from 4.55 ita dex to 4.46.1 d-rex I cant login to psn.
I have used a spoofer it said that I was on 4.66 but I still cant login.
How do I fix this? QA Flag is also enabled.

Error code: 80710104

PS: I have always been on ita, but multiple people said it is bad so thats why I decided to change it.

Thanks!

Have you enabled the QA flag? Like do you have Debug settings? If not, please follow my instructions:

- 1) Hover over Network settings in the Settings tab while having QA flag enabled
 - 2) Press and hold L2+L1+Down and DPAD Down +R2+R1+L3
- Now Debug settings should appear.

To fix your issue, follow these steps:

- 1) Change NP Environment to "np" without the ""
- 2) Turn Nav-only NP to On
- 3) Restart your PS3

Also, does it say that your firmware is 4.60?
Please tell me if this worked/didn't work.

Useful information:

In order to jailbreak and get on custom firmware, it's necessary to first downgrade to version 3.55 or lower. To downgrade, you need an e3-flasher.

To check the model, you just need to look at the back of your PS3 and it will say something like "CECH-20A1"

To check your minimum downgradable firmware, download [MinVerChk](#) and put it on your USB. Then plug the USB to the right port of your PS3 and update the PS3 via storage media.

Please give me these details here

Hey I tried to jailbreak my slim model ps3 from 2010. I got a successful dump from my ps3 with the nor e3 flasher limited edition, but when I tried to upload the patched firmware my whole entire ps3 just turned off. Now every time I turn on my ps3 after 3 seconds it turns back off. It's a total brick! I tried to unbrick it by soldering my ribbon to the tristate, but I ended up melting a hole with my soldering gun right through the damn thing. Then I decided I'd try again. So I bought a new ribbon and when it got here. I took it out of the box, and went to set it down on the table and it rubbed against my box cutter and sliced in half. Now I'm out \$40 and my ps3. Should I cough up another \$20 for a new e3 flasher ribbon or just forget about it.

I'm not Tenno, but I bought a non-jailbroken PS3 on 3.55 OFW from eBay for relatively cheap. Pretty much everything on eBay is legit, and if you do get scammed on eBay (unlikely) there is buyer protection so there's not much to worry about. It'll be cheaper to buy a non-jailbroken 3.55 OFW PS3 than a jailbroken one. If you want to save that bit of extra money, I (and many others) could help you out with the jailbreaking process.

You would need to spoof your PS3 to 4.60 by using HijamHoster's 4.60 spoof.

Here's how to spoof it:

- 1) Download and install the spoofers .pkg on your PS3.
- 2) Go into Rebug toolbox and to the "Selector" tab
- 3) Change System Mode to Normal (Don't worry if its already on Normal)
- 4) Once you've changed the system mode and let the PS3 restart, open up the spoofer you just installed
- 5) Once its installed, let it restart and then switch System Mode to Rebug. This will activate the spoofer

You can now play online on DEX.

Hey,

I never really got into the modding section before, and anyways. I've been looking after a jailbroken PS3 device, how come they so expensive? I'm talking about, I mean. They're worth around 200 - 300 dollars over ebay, which is pretty much a lot for me. I mean, 100-120 dollars would do it. But, all the way up to 300 is too expensive.

I'm not really sure why they are so expensive really, but I guess people want to make their money back from when they bought the PS3.

If you don't want to spend money on a new PS3, you can buy an hardware flasher to downgrade your PS3. A flasher is about 70-100\$, but its also risky if you have no idea what you are doing.

Hi there,

I jailbroken once my ps3 and installed cfw 3.55 but accidently my brother updated it and now it's running 4.46 ofw.

Can you guide me what i have to do in order to jailbreak it again ?? Can you suggest me an easy way to downgrade it again ??

Sending it in or doing it yourself? If you are sending it in, you need to find someone that is trusted. If you are doing it yourself, you might need help, and thats why I created this :)

It all depends on if you are hiring someone to do it or if you are doing it yourself

It also comes with an E3 Reader, if you want to solder instead of attacking the NOR clip with the ribbon cable.

Mod games

Get Free Games
Play MKV media
Run other software that provide cool features!

The disadvantages is that you:
Are stuck on old firmware
Lose access to PSN and also Game Updates
No PlayStation Plus
No multiplayer

Although there are many ways you can avoid this such as getting new CIDs and also by spoofing.
Or not going online and when you can use a rebug so you can play online and then disable the online features and play your pirated games!

Hope I helped! :) this isn't true, you can play multiplayer, and hardly ever get cid banned ? i can post a few of my modding tools if anyone here is interested.

ODE is an emulation device that lets you play backups of games, run homebrew and such

CEX is basically the retail version of PS3. Its the one you buy in the store.

I use Rebug 4.46.1 D-rex. Don't use D-Rex if you are not planning to switch to DEX. If you are

i to downgrade and jailbreak ps3 consoles! have done 10+ never had a brick, getting a bit slack nowadays haven't done one for a little while because i have 3 at the moment! (probably should sell them)

just read over this thread and OP knows what he is talking about and people are lucky to have the support he's giving! so thumbs up for that OP :)

il try answer a few things that i have read even though some have already been answered.

CEX and DEX, CEX is retail DEX is developer/debug. if your new to CFW id say go CEX because its more user friendly and then later on convert to DEX if you feel the need. (i converted straight to DEX with my first console and although it was good i just felt i couldn't use it to its potential, i ended up selling it after about 6 months and have never had DEX again.)

What i like a about CEX is that its simple you turn your ps3 on and sign in and away you go, RTM'ing is fully wireless! something i dislike is that it seems easier to get CID (console id) banned, i have been CID banned playing mw3 only and thats a game that i think they gave up on monitoring.

What i liked about DEX was more options available on RTM tools, never used anti-ban and never got CID banned in 6 months while playing Bo2 and Mw3. What i didn't like though was the fact to run TMAPi you need to be wired to your ps3 (Can be used wireless with the same program CEX uses but then theres you'r extra options with RTM tools gone, And having to do things before being able to sign in (not complicated just annoying)

I used Rebug 4.6.1 D-Rex seemed to be a decent cfw i also hear the ITA DEX cfw is good.

On CEX i stick to Rogero 4.55 cfw i have used Habib cfw but prefer Rogero.

Look for E3 flashers on alexpress.co.uk they ship WORLDWIDE i got my E3 limited for i think 70 or 80 Aud delivered to my house.

Cfw Ps3's can be played online they just need to be spoofed to the current Firmware, from what i remember with my first console (DEX) i needed the Rebug updater by BitsBubba aswell as a spoofer i may not be %100 correct it was a while ago

Another pro about DEX is i didn't have to spoof again until about a month after the next update came out! (Not sure why)

Getting valid NOR dumps can sometimes be a bit tricky, as the OP said put a coin or something on the back thick enough so that it holds a bit of pressure against it, You can also shave the bottom step of the edge of the off the clip to get it to sit flusher. (Its only plastic)

If you do decide to downgrade your self MAKE SURE you READ READ READ before doing it.

If you buy a Ps3 on 3.55 Ofw make sure it has the warranty sticker still on it or its probably just been downgraded (they sell for more then jail broken consoles most of the time)

If you're console is a Phat/Piano make sure you install a fan control and turn it up, like right up!! otherwise it will freeze often due to overheating or could even ylod.

I did have more to say but cant remember now its 8am and i haven't slept fml!!

if theres anything wrong in what i just said correct me otherwise happy to help out in this thread :) wholly shit i didn't realise i wrote that much lmao

So Back on October I bought a ps3, and Jailbroke to REBUG 4.46.1.(I believe). Sometime in december, the ps3 got YLOD.

I'm thinking about getting another ps3 to jail brake but don't know what cfw to use. I know semi alot about CEX. I know the basics and everything, but know nothing about DEX. I heard DEX is waaaaayyyy better. Can you also list the pros and cons for DEX? And if I decide to get one, what should I go on? (CEX,DEX)

Now every time I turn on my ps3 after 3 seconds it turns back off. It's a total brick! I tried to unbrick it by soldering my ribbon to the tristate, but I ended up melting a hole with my soldering gun right though the damn thing. Then I decided I'd try again. So I bought a new ribbon and when it got here. I took it out of the box, and went to set it down on the table and it rubbed against my box cutter and sliced in half. Now I'm out \$40 and my ps3. Should I cough up another \$20 for a new e3 flasher ribbon or just forget about it. you can use any valid dump from what i remember but do a google search just to be on the safe side

Modding the system + games and being able to design the software of your PS3 how you'd like.
There are so many things you can do with a jb PS3 and you just do piracy. Well done.

Your profile could be banned, or your CID could be banned. If this happens, you wont be able to connect to PSN. A profile ban is only a ban for that specific profile, but a CID ban is a global ban, which bans everything.

You can change your CID so you may access PSN again.

Yeah, you can't downgrade a superslim, plus you need a E3-Flasher to downgrade, you can't via XMB.

How would I go about unbanning myself? Is the only way to undo a console ban by spoofing another console id that I have to pay for?

I'm not sure about the error. Search the errorcode on Google.

I am not sure if it's not possible , this [Blogpost](#) is about Jailbreaking Slim&Superslim PS3 and installing a CFW ??

I didn't try it yet but will definitely will try it . what do you think ?

Yeah i just figured out this is Fake, Thank god i didn't install this shit on my Console .

Going to Downgrade my Cobra ODE from 2.2 to 2.1 this might fix everything .

the only way to undo a console ban by spoofing another console id that I have to pay for?use some sort of home-brew(ita manager etc) or cippi to set a new one, that you will have to pay for. So yes.

So I have a 4.66 DEX PS3 and planned to go online but I still have some doubts about it. What do I exactly have to do to play online with friends? As far as I know you can't have PSN with DEX so I wonder if it's even possible to play with friends.

Thanks in advance

What programmes do I have to install to play online?Well, you do not really need any specific homebrews, but to stay unbanned I would recommend PS Ninja and PSN Patch. Use PSN patch first, spoof everything then clean your history and replace with PS Ninja
