Thread: [{Tutorial} How to see other WhatsApp Messages](#)

nondescriptoldie - November 29, 2014, 6:47 am

Hello guys,

Welcome to my guide! I am going to be showing you guys how to see other peoples WhatsApp messages and images.

REQUIRMENTS:

1. Whatsapp (Must be legitimate Google Play Downloaded)
2. You must be in the same network as your target
3. Rooted Android with Busybox
4. Rooted Terminal
5. The actual Victims phone for 5 minutes

METHOD:

You have to delete your current Whatsapp. Then you need to know the MAC address of your victim. So head over to settings then about phone then status and then WIFI Mac address. Now you need to spoof your mac address to the one your victim has. To do this go to your Terminal and write:

```
:su
:busybox iplink show eth0
(This will show "your" address)
```

Now type this in!

```
:busybox ifconfig eth0 hw ether 00:22:11:22:11:22
```

(INSTEAD OF 00:22:11:22:11:22 you need to put your victims MAC)

Then enter and you have spoofed your MAC!

Now download Whatsapp and enter your victims mobile number when prompted and verify your account by using your victims phone. You have now finished! You can now send, delete messages from your friends whatsapp or ruin it. For a tool that does this remotely check out the BETA on XDA-Devs.

Thanks for reading, ?

Once you have verified you can use "their" Whatsapp as long as you have their MAC. I do not know how you have had that problem stated above though. I have tried on a:

Samsung S5 to Samsung Note 4

Samsung S5 to Samsung Note 3

Moto X to Samsung S5

Moto X to Samsung Note 4

Moto X to Samsung Note 3

They are all running KitKat and they all worked! :P
