Hosted on ge.tt

Ge.tt doesn't virus scan.

File download is "x-crypter.zip" - a virus counted by Chrome and xCrypter is another hackforums users crypter (a working one I shall say - and a great one at that)

? Just got it to run on my virtual machine - his RAT isn't even disabled on VM. It's a virus alright - the program was made in visual basic or something because it doesn't do shit - and shortly after I got a chat window like the one used in DarkComet.

iCryptex - December 2, 2014, 11:53 am

Wow. Get your infected link off of HF. I'm surprised that you're still not banned from here.
