I don't know if this is the wrong section but I've heard a lot of complaints about No-IP. Can you get caught while using it with Darkcomet?

webdev77 - December 2, 2014, 5:39 pm

Yes you could. You could get caught even if you aren't using it as well though.

Yeah, no-ip is no-good lol. You can use a different DNS from here.

<https://freedns.afraid.org> Seems to be what people use nowadays.

It is legal and safe to use NO-IP + Darkcomet together (or any other RAT) if it's used for legit purposes that is.
