Thread: [Bored - Ideas on stuff to implement and open source?](#)

Old_Horse - December 3, 2014, 2:34 pm

I'm stuck at a hotel and I'm bored out of my mind. Do you guys have any suggestions on stuff you want to get open sourced? Maybe a global mouse/keyboard hook or a plugin system? I'm open for everything that's not too big.

If this is the wrong forum, please re-direct me to the correct one.

Cheers. ?

I'd like to see a plugin system, simply to see how others do it.

I'm actually working on a module based rat. I guess I can open source a lighter version of the module system. Do you think people would be interested in that?

That might not be too bad :) I think there was a tutorial about it somewhere around here but oh well.
