Thread: [Copy my website over to my new website! Need help getting the HTML code! Paying \\$!](#)

**TheLegendaryBeast** - December 4, 2014, 2:05 pm

Hey Guys! So I have my old website on me which was created and everything but now I bought a new domain with GoDaddy and I want to transfer my website over to my new host and domain so I have to re build it. Someone told me I can get the HTML code from my website and put it on my new website to make it look and act exactly the same. But this is not my area of experience. If anybody can help me transfer my website to my new website with the HTML code or any way you know I can offer a little cash reward in return :)

Please don't add me asking how much cash I will pay for this. I would like someone to have a kind heart to help me out with this and will just be paying a bit for a reward :)

Skype: adam.kay1999

I will help you with this, but I won't add you on skype so just PM me with the link to your site.

All you need to do is right click > view page source, and copy HTML and download the CSS.

All you need to do is right click > view page source, and copy HTML and download the CSS.Or if he could access all his files he could just upload them to his new site.

There's also a metasploit tool that copies websites. Used for phishing

Edit: Just realized the age of this thread...

Good Job digging up an old thread from a closed member

**?ndrew** - September 10, 2016, 1:28 pm

I would hope this guy managed to get this done by now haha :)

You just posted on a thread that is almost 2 years old.

if his site uses any php files he cant just click ctrl s because PHP is a server-side programming language. The only way to get the PHP code itself is via a non-http method of connecting to the server (FTP, telnet, VPN/VPC etc)

He could use an ftp client like Firezilla to download his public\_html directory from his current hosting provider and upload it to his new one (godaddy) . If he has any databases and or db users etc he would need to also download a copy of it to import to his new hosting.
