Thread: [Steel Keylogger 1.1.0.9 With Screen Capture and log upload to ftp server \[local keylogger\] \[no shitcash\] \[100% FUD\]](#)

kakemonster - June 3, 2010, 7:27 am

Steel keylogger is a local keylogger (meaning that you'll have to install it yourself). Also don't know if Steel has been posted before, if it has please tell me so i can delete this thread.

Also i did not make this keylogger, all credits goes to _smithy_. original post on piratebay:
http://#.org/torrent/5496476/Steel_Keylogger_-_With_Screen_Capture_1.1.0.9

download link: <http://www.mediafire.com/?mym4fwg4btw#1>

(I uploaded the exact same file that you can download at piratebay, if you get infected or anything like that it is not my fault.)

Features:

- No installation necessary.
- Logs can be uploaded to a FTP server.
- Can capture screen shots.
- Logs all keystrokes made on the computer as well as the title of the window the keystrokes are made in. Captures passwords and all other invisible text.
- Can record all text which is copied to the clipboard (whenever Ctrl+C, Ctrl+X etc is pressed).
- Has an invisibility mode as well as user interface. Can be hidden on startup. Restoring visibility can be password protected.

[img]http://i50.[censored].com/rauh48.jpg[/img]

[img]http://i48.[censored].com/2a545x.jpg[/img]

FTP info:

you need a drivehq account to upload the logs with ftp. You also need to make a new folder and type the folder location and name in the subfolder window. if you've typed in the correct information and the test still won't be successful, then disable the firewall, or make a firewall exception for steel.

it is not working on windows 7 64bit.

that's pretty much it. feel free to post any questions and I'll try to answer the best i can. Also please tell me if there is anything i left out.

opera1996 - June 3, 2010, 7:48 am

plz i need to confirm this i need something that confirm to me that is safe and clean

kakemonster - June 3, 2010, 8:00 am

There are comments in the original piratebay post. and here is a virus scan that i just took, if you don't trust me than use the piratebay download.

poohead - June 8, 2010, 1:33 pm

Seriously, this does look really good and i know you want it to be proven to be clean, but when someone double posts they get flamed but a triple..

kakemonster - July 9, 2010, 12:24 pm

not a triple post.. if you click the "third link" (really the second one) you'll see it's the same as the first one, just putted into adf.ly

I've told you how to do it like 6 times now. type in the location of the folder you made in the bar
where it says "subfolder".type in username and password. then make a firewall exception for steel.
NOT THAT HARD.

iiijtagiii - July 26, 2010, 3:04 pm

awwww kk i get it now sort of its the file were i put Logs in on the internet
can someone tell me how to make a firewall please

I think is is pretty nice :D

bhartijoshi1988 - September 10, 2010, 8:55 am

hey guys i've written the right username and password and subfolder in the keylogger, and when i test it. it says successful aswell. but i'm not getting the logs on my drivehq account. there is only one file which is the one which is created at the testing time.

unlimitedhacking - October 2, 2010, 4:09 am

how to do remote installation with it dude?

MirrorPimp - October 2, 2010, 3:27 pm

Can i send it through email?

biggeecool - October 3, 2010, 9:20 pm

hay man downloaded it and it works great, and i binded it to a photo so i can put it on some of the school computers. So i can raise some hell, havent tried a virus scan yet, and i'm crossing my fingers that it will not show it. Thnanks man. first post and i love it been looking for a simple logger like this peac and pot man, keep up the good work

gr8 dude it work and it was a nice one >.<'

D3s7iny - October 4, 2010, 1:39 am

why cant run it? havesame problem with some other keyloggers toi. have .net framework3.5 installed

kenny6 - October 4, 2010, 4:17 am

Thx for this m8 i think some one has been snooping around on my computer when i go out.

I refuse to use a log in password on my computer, i would rather catch him in the act this will do just fine

EDIT: i notice it doesn't save it as name.jpeg its just name.jpeg and takes some time to go through them all, is there a way to quickly add the . into the names?

If I scan it, it says: Malware detected.

When i take a further look at the error, it says there is a virus inside of it.
