Thread: [\[Review\] Automated Computer Cleanup-Tron](#)

-Hyperion - December 7, 2014, 3:23 pm

Hey guys it's Hyperion ?

Today I will be reviewing and giving you my thought on a user created script called Tron.

What is Tron? In the developers own words Quote:Tron is a script that "fights for the User"; basically automates a bunch of scanning/disinfection/cleanup tools on a Windows system. I got tired of running these utilities manually and decided to just script the whole thing. I hope this helps other techs and admins.

Tron is relatively new and is constantly under going revisions. I will be talking about the latest version 4.2.0 and the functionality it provides.

What does Tron do? Tron automates and runs several common programs for you saving you time and then emailing you the logs when done. Here is a list of its stages and what it does.

Quote:Stages of Tron:

Prep: rkill, ProcessKiller, TDSSKiller, registry backup, WMI repair, sysrestore clean, oldest VSS set purge

Tempclean: TempFileCleanup, CCleaner, BleachBit, backup & clear event logs, Windows Update cache cleanup, Internet Explorer cleanup

De-bloat: remove OEM bloatware; customizable list is in

\resources\stage_3_de-bloat\oem\programs_to_target.txt; Metro debloat (Win8/8.1/2012 only)

Disinfect: RogueKiller, Vipre Rescue Scanner, Sophos Virus Removal Tool, Malwarebytes

Anti-Malware, DISM image check (Win8/2012 only), sfc /scannow

Patch: Updates 7-Zip, Java, and Adobe Flash/Reader and disables nag/update screens (uses some of our PDQ packs); then installs any pending Windows updates

Optimize: chkdsk (if necessary), Defrag %SystemDrive% (usually C:); skipped if system drive is an SSD

Wrap-up: Email job completion report (if configured; specify SMTP settings in

\resources\stage_6_wrap-up\email_report\SwiithMailSettings.xml

Manual stuff: Contains additional optional tools that can't currently be automated (ComboFix, AdwCleaner, aswMBR, autoruns, etc.)

As you can see there are 6 stages(5 if you do not count the manual one) that take between 2 and 8 hours to run depending on the size of hard drive and severity of a cleanup. 99% of these programs are ones I either use on computers or are widely respected. The only area that stands improvement right now is disinfect as I strongly dislike Vipre and JRT/ADWcleaner still have to be run manually. These features will be added in a future version and you can just edit out the programs you do not like.

How have I tested Tron? I have used Tron for the past month on about 20 computers and several of my own. I can tell you that it does in fact save me time from running each one manually aside from the last 2 scan with JRT/ADW.

Each of these computer have had different problems from messed up boot sectors to rootkits installed on them. Aside from one instance(TDSSkiller problem) it has run smoothly and cleaned each and every PC up fully.

Who should use Tron? If you manage a lot of computer or just need to clean up your computer I

would recommend this program as it scans in the right order and saves all the logs for you. I am now personally starting to use it on more and more computers I work on. You must be able to follow its instructions and run it in safe-mode with networking only. The only thing I would warn against is in manual tools it does include Combofix which should never be run but by trained users. Aside from that with its high level of customization it is a near perfect tool. 8/10

Where can I get Tron? You can read more about it and download it [Here](#) and on [GitHub](#)

I hope this helps and gives you another tool to use.

Aura - December 7, 2014, 4:19 pm

Formatting still sucks.

Plus I was expecting a 15 pages report.

0/10. Son, I am dissapoint.

I dun know how do this, plez make tutorial?

?ULL - December 7, 2014, 4:36 pm

hmm, well i would give it a shot if i still worked in the IT industry.

simple fix its called hit f5 till the site comes back up

Aura - December 7, 2014, 4:46 pm

Just link the Sourceforge page of the tool instead, lol.

That's what I mean, I just forgot that it was on Github and not on Sourceforge, lol.

Truzzie - December 8, 2014, 3:02 am

Interesting, I have to take a look at try this out myself :D Seems kinda advanced, might just be me :p

How would you combine the commands and execute the choosen commands at the same time?

This is what we call coding/programming/scripting, it can creates a bunch of magical stuff.

Thank you for the very informative answer, it sure helped me..

No need to be a douche to those who try to learn, I figured it out myself.

Well you asked how it worked, the file is a .bat file (which means, command prompt executable) on which you can simply right-click, and select "Edit" and then you'll see all the commands behind. So I guess you had the answer all along.

-Hyperion - December 8, 2014, 6:15 pm

It is even labeled what everything is inside and tell you what you can add and where to add it.
