MSIL? Hmm, might be decent but the fact that it is MSIL throws me off :blackhat :

TheLegendaryBeast - December 9, 2014, 6:00 am

This is an amazing crypter! I have personally used it and it has made my file 100% FUD and it's still stayed that way for about 2 days now! Grew crypter and I can personally vouch for it! Nice job Elixir! :)

N3oNight - December 9, 2014, 7:36 am

Cloud Encryption is really good feature if the crypter bypass Firewall.
Best of luck with sales buddy.

Best of luck with sales buddy. Yes we do bypass proactives and firewalls. Thank you N3oNight.

Wardow - December 9, 2014, 10:04 am

Can you post proofs of Runtime fud? Like Norton/Eset/KaperSky Pure/Avast/BitDefender/Avira etc... and bypass firewall on all avs.

Thanks, if you're bypassing all, that can be very good for your sales!

Ecasrev - December 9, 2014, 10:06 am

I really like how this site is designed, you should consider offering a paypal payment system as well.
Goodluck with sales.

Just got my file crypted and I can tell you that this is HQ as fuck!

Veii - December 9, 2014, 6:02 pm

Used this service to crypt my file and it's a fantastic service and I love the idea of it being cloud, and also very easy to use. However the best bit about it was elixir, he was amazingly helpful and understanding with me and I couldn't really of asked for more.

Definitely vouch for this!

Since it's MSIL what is the stub size? Are all parts MSIL or just the initial "loader"?

That's a great question, thanks for asking. The current stub size is 22kb and yes, it is all MSIL. Though, I do supply a HQ icon, but that can be changed to reduce size.

The FUD rate has a lot of independent variables. The average seems to be 4 to 5 days from the collected data.

Pinewapple - March 26, 2015, 11:41 am

This is not trashing his thread, Just my opinion.

Well everytime there is a problem i simply contact msil on skype and its sorted. But today i crypted and it was 1/35 with the insite scanner. I downloaded it to scan it off site same thing i emailed him to tell him this as its advertised as "FUD", Not he just says i get upset all the time when im telling him theres a problem instead of simply fixing it. He could have simply offered a free crypt but no.

Now please note this when you buy credit and crypt it DOESNT charge you then it charges you when you DOWNLOAD the file. He says it says in thread about this which it doesnt he may edit by time you read this. Im shocked as its usually top service and never a problem.. Just a heads out to you people who may delete the file accidental or download it 10 times and get charged alot.

Last thing, I emailed him within 1 minutes of crypting and downloading.

FYI.

You could do that, but a USB autorun might be better.

The crypter itself does not cause a runtime detection. If you use software like darkcomet, then yes it will be detected.

When our team tested compatibility, it worked flawlessly. I would recommend using Luminosity's install and rootkit feature instead of msil's and use self injection. Only if errors occur.

This didn't quite answer my question, I was asking "The only difference between using the Free and Paid engine is that the Free engine forces you to enable "compatibility", could this be causing the problem?"

I'm just saying, the free engine doesn't work on LuminosityLink, KFC Watermelon said that if a crypter uses reflection instead of injection into the RunPE then it will corrupt the persistence.

If your team performed tests, I would suggest that they re-do these tests but this time they should kill the process through the task manager to see if it comes back.

Thanks, I really hope you can clear this up for me since MSIL looks like a very high quality crypter.

Edit: I can supply you with a LuminosityLink stub to perform testing on if you want.

Will this ever be back working? Let's hope...

jwhimp - August 20, 2015, 6:31 am

I want to buy this , please pm with payment details

Keybored - August 20, 2015, 12:29 pm

Just purchased. How long will it take to receive the credits so I can download my crypted file?

Should have read the thread before purchasing. This project seems to be abandoned but I'm sure he's still spending the btc he's receiving.

It works again. Who test?

Raymond Reddington - August 21, 2015, 2:47 am

Site seems to be up again. Does this work?

The site is back but the crypt is 2/35 atm, hope this project wasn't abandoned

Edit : Crypted with another icon and got 1/35 avg.

Runtime scan. DC Crypted with the free plan. Doesn't worth it at all.

Right now there is one detection. http://scan4you.net/result.php?id=1111a_hgel63

I am taking care of it right now. Stop sales trashing.

For everyone reading the post above, you can crypt and scan BEFORE paying. Credits are deducted upon downloading the crypted file.

St?lk?r - October 13, 2015, 7:27 am

Just bought some Credits will test it asap :) Will post a scan later :)

You can scan it on the site mate. You just pay if you download it so why you download something without scanning mate.
