Thread: [How to put Google In your Application \[Web Browser Function \] \[Tutorial \]](#)

Swagalistic Meow - December 9, 2014, 8:43 am

First you'll need you're form it doesn't have to be blank but it's better if it's just a blank Form

Like this

- [imgur. com /prG86ue](#)

Then you'll want to add a WebBroswer

- [imgur.com/nmPtE2P](#)

Now go to the properties section and goto Url

Now by URL Enter `www. google .com`

Like this

Note : you can also change it to any other URL you want but in this case it'll be Google.

- [imgur .com/IIWYthw](#)

You can also Undock the broswer and size it I'll do it on a different tutorial.

Then your basically done. ?

This isn't a tutorial my friend. It also is a bad solution. Guys don't do it like he said.

Sorry OP but bad habits shouldn't be teached :(

Greetings

Are you fucking kidding me?

This is BRILLIANT. Thanks for this heart-warming tutorial. I have never liked a tutorial in my life but this was UNIQUE, extremely helpful, and with your tutorial I have developed an application and I sold it to Google for 5 million USD.

Thank you again for coming up with this impressive tutorial!
