Thread: [Most Tiny Remote Desktop + C#](#)

Only3 - December 9, 2014, 9:27 am

? for the lololo

Edit - drag req more compact

C#

?

CottleSilver - December 9, 2014, 10:13 am

as usual just use <http://www.onlineocr.net/>

DragonHunter - December 9, 2014, 11:03 am

Want a more compact remote desktop source code ? remove all the enters

Don't show your friends this hack, it's only for the 1337 ?

Only3 - December 9, 2014, 11:11 am

?

DBots - December 9, 2014, 11:35 am

@Only3 - I haven't tried this but looks interesting. I don't mind the images but you should add a pastebin or something.

@Cottle - What does that site have to do with what he posted?

morphine1337 - December 9, 2014, 11:47 am

You sir just won the internet.

Made my day ??

SIM-1456245 - December 10, 2014, 9:13 am

Come on man, stop it. I mean this kind of code is NOT good. Who wants random one liners that NO

one can read without some serious eye surgeries. If you are going to work with such a high level language like VB & C#, then use them how they are intended to be used. Especially VB with it's unique clean syntax. Use OOP, make everything modular, separate things. And most importantly, stop with the one liners, they are not good for anyone.

Pro Tip: If you still want tiny one liners like that, release the proper code with a separate minified version.

Forgot to mention, if you really thing that you are doing any good by posting images instead of code, you are very very wrong. If you did the effort to type in the code, why not post it here. I would reccomend pastebin tho. Because you can update the code easily. As a bonus, you will have a collection of nicley written source codes not only for the people tht are visiting your pastebin page, but also foe you personally.

Only3 - December 10, 2014, 2:19 pm

my hobby ? when u master coding theres point when u looking for challenge thats what im doing the images is for the thread color ? also the smiles ?

one of many examples how its goes ... if u want to check the last one liner just say u gonna love it <https://hackforums.net/showthread.php?tid=4575340&pid=43720647#pid43720647>

SIM-1456245 - December 10, 2014, 2:27 pm

OK great, I appreciate that. I would really love to see a nicely written piece of code in a nice serious thread posted here. Just so you can prove me and the other's that you aren't a noob, if you are really not a noob.

Only3 - December 10, 2014, 2:33 pm

noob ? didnt u check the example didnt u see the last edit to write one line u should know first how to code it

SIM-1456245 - December 10, 2014, 2:37 pm

(Dec 10, 2014 03:33 PM)Only3 Wrote: [\[CITE\]](#) noob ? didnt u check the example didnt u see the last edit to write one line u should know first how to code it

OK as I suggested, you can release nice projects with their minified version, because that is your hobby. Work the way you want, that is just my suggestion.

Only3 - December 10, 2014, 2:48 pm

i have tons of projects, codes, functions that i bet ppl will pay for them and no one can find them on the internet cuz i code them

didnt u already saw that the codes i post is unique

anyway why i should post them ? to remind u check whats happend with ur threads

SIM-1456245 - December 10, 2014, 2:51 pm

Whatever, I'm not going to waste time with you, you are just 3, only 3. So meeh, why bother even trying to make 3.1 out of you.

I tried to give you a couple of suggestions, but obviously you don't want suggestions...

Only3 made me edit my post...

idb. - December 10, 2014, 3:16 pm

Why do people always bring up one liners or the way people name their variables? Who gives a shit? YOU can convert the one line back to multiline and/or the variable names yourself. Are you going to actually use this code? If not, why does it even matter? If so, why does it even matter?

SubGenius - December 10, 2014, 7:14 pm

AntiHacker - December 11, 2014, 2:07 am

```
DoubleBuffered = True
Dim C As New Net.Sockets.TcpClient
Dim S As New Net.Sockets.TcpListener(Net.IPAddress.Any, 81)
Threading.ThreadPool.QueueUserWorkItem(Sub()
While True
If Not C.Connected Then S.Start()
C = S.AcceptTcpClient Else If C.Connected Then BackgroundImage = New
Runtime.Serialization.Formatters.Binary.BinaryFormatter().Deserialize(C.GetStream)
End If End While End Sub)
Dim T As New Net.Sockets.TcpClient
81)
With {.Enabled = True}.Tick, Sub()
Dim B = New Bitmap(Screen.PrimaryScreen.Bounds.Width, Screen.PrimaryScreen.Bounds.Height,
System.Drawing.Imaging.PixelFormat.Format32bppArgb)
Graphics.FromImage(B).CopyFromScreen (Screen.PrimaryScreen.Bounds.X,
Screen.PrimaryScreen.Bounds.Y, 0, 0,
Screen.PrimaryScreen.Bounds.Size, CopyPixelOperation.SourceCopy)
Call New
Runtime.Serialization.Formatters.Binary.BinaryFormatter().Serialize(T.GetStream, B)
End Sub
```

IAmNotHere - December 11, 2014, 2:15 am

```
Code T.Connect("127.0.0.1",81)
AddHandler New Timer()
```

Proton! - December 13, 2014, 5:12 am

This code can be found on YouTube... <https://www.youtube.com/watch?v=Mr1SVF5tfb8>
Nothing special, just a really bad way.

Marwix - December 13, 2014, 6:20 am

I totally agree with Electroalek in this case.

OP: Why couldn't you just copy the source code and paste it into a [code] format instead? I'm pretty sure nobody would ever want to write it by hand but that's just me.

Also, you could put spoilers for those screenshots and probably explain a little more about 'your' code for new people to understand it and how to use it. In overall, it looks good.

Zettabit - December 13, 2014, 9:05 am

If you can't write that by hand, then what is the point of CODING in the first place? All people want to do is C+P shit in this forum, and it's getting really old.

EDIT: This isn't meant just for you, it's everybody.

SubGenius - December 13, 2014, 9:51 am

The point of coding is thinking. It makes no difference if it can be copied as text or seen in an image as long as the code is given in public.

Although I would prefer copy something than waste my time writing it again.

Please elaborate. I'd love to hear this explanation of how you can be a coder, yet C+P everything you've programmed. If you don't have enough "time" to program something, find a new hobby, because clearly you don't have "time" to re-write 5 lines.
