Thread: [ToolTip in Visual Basic .NET \[Tut \]](#)

Teruz14 - December 10, 2014, 6:22 am

Hello hackforums today this lesson describes the ToolTip control. :)

- <https://imgur.com/WyklUPe>

This component allows you to provide tooltip help when you hover the mouse over another control.

- <https://imgur.com/xZtH2MU>

After you add a ToolTip component to a form, the other controls on the form get a special ToolTip property.

For example, suppose that you create a ToolTip component named ToolTip1. Then a TextBox on the form would have a new property named "ToolTip on ToolTip1"

- <https://imgur.com/eGGGrVy>

Set that property to the text you want the ToolTip to display, and you are all set.

- <https://imgur.com/nRpVv1G>

Similar to HelpProvider you set the ToolTip programmatically

Quote: ToolTip1.SetToolTip(TextBox1, "This field is required.")

Hope you enjoyed. ?

Did you just link to an image hoster page and not a direct image?

Shit that's funny.

webdev77 - December 10, 2014, 6:30 am

You need to direct link your images. The tutorial itself is not bad, just hard to read.
