Thread: [Redesigned Omnicoin Desktop Application. Omnicha.in frontend.](#)

Drizzy?? - December 11, 2014, 8:15 pm

This is not an actual desktop application, this is a Omnicha.in frontend application.

Hey guys, so I was bored looking through the news, and saw that the site "http://omnicha.in/" has an API, so I decided to implement it into a desktop application while making it look good.

You can download it here: <http://drizzyvpn.tk/OMC.exe>

Scan is here:

<https://www.virustotal.com/en/file/be08fd2d05e4c7125d02ba2b0fa1ce7b7644a4d8298689e74ced2fe9dfbf9389/analysis/1418951154/>

~Jay~ - December 11, 2014, 8:20 pm

This looks really, really nice. Great work, man.

Abraham Lincoln - December 11, 2014, 9:13 pm

Just to clarify this product is not created by, sponsored, or endorsed by myself or Omnichain. Use at your own risk.

SIM-2015410 - December 12, 2014, 5:00 pm

Looks good from the screenshots. I will do a bit of testing, etc.

As Abe said, use at your own risk.

EDIT: After looking at the OP's source code, the code is sending all passwords unencrypted to a file on drizzyvpn.tk/hash.php in order to encrypt it. This could potentially keep a record of all passwords sent to it, so please be careful. OP, please change your code to encrypt the passwords locally with SHA256 and then send to omnicha.in

Entire - December 16, 2014, 7:27 am

Although, you should have register and login on the same tab. 2 different buttons with the same textbox. Would look nicer. Also change the color's from the theme defaults. On the good side, does like like a very great tool ! :D

Death - December 16, 2014, 7:29 am

Please could you do an OSX port for us Mac users.

SIM-2015410 - December 16, 2014, 2:28 pm

As I said, Drizzy has not patched the issue. All your passwords could be potentially being captured and stored by the OP. Use with extreme caution. OP ignored my last PM

Drizzy?? - December 18, 2014, 4:05 pm

I have removed the remote SHA512 hashing and it is done within the program now.

SIM-2015410 - December 18, 2014, 5:02 pm

I have the new source, and the issue has been fixed. The program looks safe to use now, but as usual, it is your own risk.

Thanks for the contribution to OMC Drizzy ?

iamskid - January 17, 2015, 4:43 am

This theme is good for .NET malware but looks highly unprofessional for a money wallet. I am not going near it.

Crypto™ - January 17, 2015, 5:16 am

You should also clarify that this isn't actually a true desktop wallet, but rather a desktop frontend for the Omnicha.in wallet in both the thread title, and the title of the application.

Legion. - January 18, 2015, 2:20 pm

Looks really nice. Exactly like Rebel Botnet?

QoL?? - January 18, 2015, 2:22 pm

A lot of things use the same or similar theme. Seems to be a trend on HF.

Legion. - January 18, 2015, 2:33 pm

Yeah, where do they all get that theme from?

FRANKIE - January 18, 2015, 2:36 pm

The theme is incredible, I applaud you on that.

I however have no real use for it as I have a wallet so..

Thanks for sharing OP

SIM-2015410 - January 19, 2015, 4:37 pm

(Jan 18, 2015 03:33 PM)Legion. Wrote: [\[CITE\]](#) Yeah, where do they all get that theme from?
It is just the flat ui theme for visual basic .net
