Thread: [\[SUB/FUNCTION\] Improve label text / How to Add Swag Too Labels](#)

?MrRoot - December 12, 2014, 5:35 am

Hello, I will teach you how to do this [\(Click to View\)](#)

[Video: <https://www.youtube.com/watch?v=PwxuOsrWnUY>]

but then with a label & with any message in vb.Net

I've have this in php (<http://deface.botblog.ga/> (scroll down & look the console) THIS SITE IS A TEMPLATE I USE AT PAGES I DEFACED) but remade it in vb.Net

1. The Code [\(Click to View\)](#)

Just copy-paste this in your code :)

Code Sub AddSwagToLabel(youritem As Object, message As String, Optional timeout As Integer = 20)

```
    CheckForIllegalCrossThreadCalls = False
    Dim pref As String = " _ "
    Dim eachline() As String = message.Split(New String() {Environment.NewLine},
StringSplitOptions.RemoveEmptyEntries)
    youritem.Text = pref
    Windows.Forms.Application.DoEvents()
    For i = 0 To eachline.Length - 1
        Dim eachword() As String = eachline(i).Split(" ")

        For ii = 0 To eachword.Length - 1
            Dim eachchar() As Char = eachword(ii).ToCharArray

            For iii = 0 To eachchar.Length - 1
                Thread.Sleep(timeout)
                youritem.Text = (youritem.Text.Replace(pref, "")) & eachchar(iii) & pref
                Windows.Forms.Application.DoEvents()
            Next
            youritem.Text = (youritem.Text).Replace("_", "") & " _ "
            Windows.Forms.Application.DoEvents()
        Next
        youritem.Text = (youritem.Text & youritem.Text).Replace("_", "") & " _ "
        Windows.Forms.Application.DoEvents()
    Next
    youritem.Text = youritem.Text.Replace("_", "")
    Windows.Forms.Application.DoEvents()
End Sub
```

2. Usage [\(Click to View\)](#)

Okay, now that you have your code, you wont have any errors, else pm me!
To use it, you just call the sub.

Like

```
Code Dim YourMessage As String = "IT WORKS :ooo"
```

```
AddSwagToLabel(Label1, YourMessage)
```

this will animate label1 with the text given, if you want it slower just do

```
Code Dim YourMessage As String = "IT WORKS :ooo"
```

```
AddSwagToLabel(Label1, YourMessage, 30)
```

timeout is in ms.

the timeout decides how much delay there is between writing 1 letter.

10 = extreme fast

20 = fast (default)

30 = normal

40 = below normal

50 = even normal

100 = you can guess....

3. FAQ ([Click to View](#))

Q: Is this code from the internet?

A: Nope.

Q: My application freezes while animating?

A: You need to multithread it, the code works easily with multithreading.

Q: Are you the creator?

A: Yes.

Q: This is cool!

A: Thanks but ain't a question.

Q: Whats Application.DoEvents()?

A: Updates the form, just a tiny fix for some computers.

Q: And CheckForIllegalCrossThreads = True ?

A: If you want to multithread it, this comes by handy!

Q: Why 'Swag'?

A: Any better name?

Q: I've got another question?

A: PM Me!

My next project might be: make a cmd with this function :p

MrOrang - December 12, 2014, 6:58 am

Your video is private man. Mind making it available for us?

for us?

Done, I was confused about the difference between private/unlisted for a bit

Royal Bash - December 15, 2014, 11:13 am

This is really awesome man, thanks a ton! Will be usefull for sure ;).

No problem :) I made it for myself and thought I'd share it cause I liked it!

?MrRoot - January 5, 2015, 9:36 am

woah I thought this looked cool tho

+Haze - January 5, 2015, 10:05 am

Code CheckForIllegalCrossThreadCalls = False

Windows.Forms.Application.DoEvents()

You should never use these in your code, especially the first one. That's not good programming practice.
