Thread: [\[FREE\] Rat Setup And Test \[FREE\]](#)

w?fl - December 14, 2014, 5:39 pm

Hey guys, doing a free RAT set up for anyone that is confused or struggling with the process. If you have never actually set up a RAT, and want to try spreading yourself, please feel free to PM me your skype. Anyone with an interest in Remote Administration Tools should have the chance to try. But none the less, I will only help users with 10+ rep or more. This is for my security and the security of others on HF. Have a good day ?

? security?
Please explain

And you don't even qualify for your own thread requirement lmao

Security for the users of hackforums, if a un trusted user was supplied help in setting up something such as a RAT, they might try to spread it on these forums, hence the reason I'm not helping un trusted users. Saftey for myself includes un trusted members abusing the information I supply, and then having it lead back to be my fault.

EDIT: The reason that I myself don't meet my threads requirements is the plain fact that I trust different people. If you have a hard time trusting me, then you don't have to, find someone else on the forums that will aid you in this setup.
