Thread: [VB6 TCP Attacker / DOS / DDOS Attacking Source Code](#)

iHackS - June 3, 2010, 6:18 pm

Basic example of flooding a website and using up bandwidth quickly just by using a form and a winsock control

usefull for those who do RAT's botnets or just want to attack a site out of spite.

Please note you wont be able to use this to dos down sites with your own pc the reason being is because i highly doubt your bandwidth output is strong enough to over throw a server.

Please provide feedback so I can release better public versions..

Suicidal Thoughts - June 7, 2010, 4:29 am

Plz post sum pics about it man :()

Neroxan - June 7, 2010, 4:48 am

This work on home connections or just websites?

Asking as you mentioned ddos'ing but this source looks like its setup as a simple pinger would be.

If you place this script on effected computers with more than one it will be considered DDoS.

Sure it would, but youd have to do it all manually in order to hit the button unless your go....

nvm.

Just check into using winsock controls broski.

autorunman22 - February 1, 2011, 11:15 am

Maybe you mean, our bandwith is NOT enough to over thrown a server. please correct if im wrong

Matthew 6:33 - February 3, 2011, 1:23 pm

hellow yes got the code thanks wiii

kinglaz - March 21, 2011, 4:00 pm

cool....but would have been better if you uploaded some pictures...

kurdish_law - March 21, 2011, 5:40 pm

May i have this too? thanks :)

forgottensiinz - May 5, 2011, 4:55 am

sorry im new at this, what do i do with the code? D:

hackhack69 - October 27, 2011, 6:27 am

me too i am new dont know what to do next.thanks

R4sleX - October 27, 2011, 6:38 am

Nice (:.. thank you.. But this is VERY simple method.. not very effective..

Which is not surprising, considering this thread is three years old.
