Thread: [How to put a keylogger on my own pc](#)

Jesse Pinkman. - December 18, 2014, 12:12 am

My friend is going to come over in a day, is there a way i can key log my computer so i can steal his accounts?

vercenta - December 18, 2014, 12:16 am

Sure.

Download a local keylogger, install it, run it (might want to pick something stealthy).

Go back to your computer and check the logs.

By the way, you seem like a pretty douchy friend if you want to steal his passwords.

where can i get a local keyloggerany keylogger will do, you dont need a specific type to use on your own PC

you could either use a free RAT to get his keylogs or buy a keylogger as most free ones dont work properly

Free RAT: <https://hackforums.net/showthread.php?tid=2632776>

cheap keylogger: <https://hackforums.net/showthread.php?tid=4583928>

basic Free Keylogger: <https://hackforums.net/showthread.php?tid=4480319> (not sure if this one still works properly)

Free Keylogger: <https://hackforums.net/showthread.php?tid=4522377> (not sure if this one still works properly)

Ardamax is a pretty efficient local and remote keylogger. You should check it out: [ardamax\(dot\)com / keylogger/](#)
