Thread: [Need Source Folder Lock With Password](#)

DeVoreshyah - December 18, 2014, 8:26 am

Hello guys, im a new member in this forum. Previous apologize because I was new and immediately asked for the source of this, I need to secure my folder of my brothers and sisters. And for me to give the application to my friends, but I've tried to use the source from google, but can be overcome by replacing the account.

I hope one of the members here can help me, if you have the source please reply to this thread and I need not C # Windows Application. Thank you,

Do you want C# or VB.Net? You're kind of confusing the the last sentence.

Pretty sure you can't password protect a folder using VB.NET mate

Proton! - December 18, 2014, 10:17 am

There is a way to do it like a "Builder" - stub way.

One of them is locked folder can still be accessed by replacing account So handle these bugs you speak of yourself. I don't see the point in hunting for a source when you won't change anything rather than downloading a folder locker that does what you need.

DeVoreshyah - December 19, 2014, 3:15 am

or put it this way, I would use a system where the folder will be moved and rename with CLSID. But CLSID I know only a little, does anyone know where the CLSID folder display a padlock icon?

Why not do it like this!

For each file in folder, read that file in byte array, encrypt it using aes or whatever, delete the original file and save the byte array with the original filename and add extension .enc or whatever!

The trouble is that he has to download it again, but who is downloading porn these days anyway! Just use online services like everybody else!

Isnt that the point of encrypting the file, just create reverse function that decrypt the file and save it with original file name!
