So you're looking for a crypter? Which would make your keylogger/rat undetectable?

I'd recommend finding a free keylogger and buy a crypter to make it fully undetectable.

I can hook you up to my license of ZeroLogger, i have been given full permission to re-sell my license. It is a great keylogger and easy to use. For a cheap amount.

To make it fully undetectable, i recommend the MSIL Cloud Crypter.

For only 5 bucks. You can make it fully FUD for a great amount of time.

Pm if you are interested.

if you need a Custom coded Keylogger with Downloader function, i can code one for you. Accepts escrow too.

let me know which functions you desire via pm.

Why not just use a free RAT like dark comet?
