Thread: [WHY NOT TO USE Kik/Reddit/Gca.sh](#)

Azraelstear - December 22, 2014, 4:10 am

I see there's just another thread about Gca.sh and Reddit/kik method.

And someone even though "Hmm, it would be good to make paid e-book from this public method"

So here are reasons why this method SUX.

1. This method was already posted by juancarlos. Please don't repost it.
2. Gca.sh is UBERannoying, with 2 pop-ups, intermediate AD promoting Malware
3. Gca.sh captcha doesn't load often in Chrome making people unable to go to content.
4. any less annoying URL shortener makes much more counted views.
5. With malware infested intermediate landing pages, and pure money making motivation won't get you far in Reddit
6. Reddit readers are learning fast and most WILL STOP CLICKING on Gca.sh
7. MOST OF REDDIT traffic is from US. So it's plain stupidity to choose Gca.sh with their pathetic FLAT RATE and high losses due to captcha and malware infested intermediate ad.

MAIN PROBLEM:

If I have thousands of horny visitors I would be stupid to monetize them with Gca.sh when I can drive them to website with Adult dating or Ex-GF affiliate links and content.

As most of Reddit traffic is US, they have high GDP per capita and high computer skills, are used to paypal, paying with CC's ... they are one of very few nations that actually spend money online regularly

Around 60% US traffic. Any penny method is waste of effort.

<http://www.similarweb.com/website/reddit.com>

Alexa have only 2-3M toolbars. Similarweb is from Israelis and according to guys that deal with them, they have data from over 50M computers so they are more accurate.
