Thread: [\[FREE\] Crosshairdresser - Add a crosshair to every game](#)

BerryP - December 22, 2014, 1:58 pm

Hey,

this is just a small release a friend of mine needed this for DayZ, so I decided to publish it here on Hackforums for you guys.

Simply choose the process/handle/window you want the crosshair to be by double clicking the item. Then click start. Thats it. I maybe add more features like a crosshair creator in the future.

Please note: This wont work with games in fullscreen mode You need fullscreenwindow mode. I am also not liable for any problems like bans for this "hack", use it at your own risk.

[Click Me](#)

[Virus Scan](#)

Screenshot:

Peace ?

No virus scan?

I made something like this in c++, seems like it'd be a lot easier to do it in vb.net. What's the framework on it 2.0?

King of Clubs - December 22, 2014, 2:00 pm

Can we have a screenshot of the cross hair as well as a virus scan.

Adding the Virusscan atm :)

And doing the screenshot too

Yes, Framework 2.0 :) Yeah the method I am using isnt the best, but easy ;)

Peace ?

Sounds like a really useful program.

I suggest uploading some screenshots and virus scans.

Are there any features? Like changing the cross hair color or size?

\$lick - December 22, 2014, 2:01 pm

The solution file is safe to execute, nice release.

Not atm, maybe going to add that. But the problem is, I cant update the main thread after while because I dont have L33t... (Thats the reason why my download project stopped.) So I would have to do it in some hours and I am to tired for it...

Thanks for the release.

There isnt any way to hook DirectX directly in VB right? :(

Regards
