It's completely free mate, no need for vouch copies or whatnot, just access the link in the image

Mr.Luce - December 23, 2014, 5:54 am

Sure it doesn't track our ip when we visit it?

This is my tool and my server, technically in all aspects, I can track anyone's IPs that goes to my server but no, this is not what this thread is about. Simply put, this is a tool I just made public to the HF community 5 mins ago! :) This is simply put, an IP-Tracker with another cool feature behind it, which is the pixel beacon.

ThatBlackDude - December 23, 2014, 6:08 am

It's really nothing that special, it's just almost like any other IP-Loggers out there, the unshortened link is not google, it's still my site but the one you used must have followed the redirection. The only thing unique is the pixel tracker, I highly and absolutely strongly suggest you try that out, I don't think there is many pixel trackers out there!

Pretty neat tool mate. :)

However it isn't that hard to make your own private one in PHP this can come handy for sure for some people.

Yeah, it isn't that hard to make a tracker in PHP but on the consumer end, no one really needs an IP so badly that code their own, my tools takes out the coding part and just leaves the "getting IP" part.

Charlie Sloth - December 24, 2014, 6:28 am

that actually looks nice, and the GUI looks pretty simple.

MitigationPiPE - December 27, 2014, 10:09 am

You should add another tool to the site.

Something that goes hand and hand with the IP Tracker tool..

Like a Geolocation tool!

???Senpai - December 27, 2014, 10:35 am

Vouch for my bitch, Flare. His IP-Tracker is the bomb, yo.

Best regards,
