About iSpy Keylogger V3:

iSpy Keylogger is most advanced keylogger on the HackForums market. This keylogger consists of a plethora of features from password recovery (Google Chrome, Internet Explorer, MineCraft, and many others) all the way to an Oldschool Runescape Bank Pin Logger. iSpy was developed in C#.NET. The iSpy Builder requires .NET framework 3.5, while the actual keylogger only requires .NET framework 2.0 (Almost all machines past XP come shipped with this.) iSpy Keylogger is only compatible on Windows operating systems. iSpy is not a new keylogger, it has been around for months of development (Old thread - <https://hackforums.net/showthread.php?tid=4512221>) The Web Panel was developed by my partner, Razza, who has equal share into this project. <https://hackforums.net/member.php?action=profile&uid=929715>

After being in contact with Venomous Net for a few days now, I decided to buy the lifetime license of the Keylogger as (in my opinion) it offers great functions) and is developed by two great members of this community!

iSpy comes with a pretty nice GUI and uses NetSeal for licensing.

The integrated stealer works like a charm and the whole tool runs superfast!

I definitely vouch for those two guys and their tool! Just out of interest and curiosity, I am really liking the sound of this. I just want to know a few things. Will this be able to log passwords such as Paypal, CC information etc (curious). Is it FUD? We don't endorse hacking of paypal or CC, everything you do is at your own risk.

It isn't FUD, but Venom will crypt it for you.

.net framework 2.0 is needed, however, it's installed on almost all machines.

Have not tested on unicode systems, I did not design this software to work on those systems, so I doubt that it is magically compatible.

Also, I have been working very hard on v3.6 update, the RuneScape Pinlogger will be heavily improved. Also improved communication parameters with webpanel.

Performing some last checks on 3.6, will push the update within the hour I assume.

Edit: Wont be doing this today as RS07 f2p servers are down.

Turns out he ended up framing me, One of his buyers messaged me on skype asking why i had access to his files. Strange this is I didnt even know this was even released yet. As i got a new computer. He basically framed me to his customer saying I had access when indeed was not me. As Venom setup his customers server.

Instead of trying to trash my sales. You could open a scam report or whatever you want to do. Post pictures or something? I need more details.

Your rep says a lot.

Does it add to startup?
Does it capture steam login/password?
?

Yes! You have two different startup options and can also activate "startup persistence".

It captures EVERY keystroke on the infected system. So it also captures Steam login/pw. THE inbuilt stealer doesn't support Steam, though.

I don't think you have the rights to say something like that to one of your 'customers'. Why not just help him, gosh.. ???

Don't ruin your business. Otherwise you and your 'partnership' will sink down in eternity.

We haven't fixed the problem? I haven't even looked at your computer. Considering you are the only one that has/reported this issue means it is most likely you.

Also, we have been working on V4.0, will is almost completely re-doing iSpy Keylogger with a plugin system.

Also I will probably just refund your ass later tonight considering you are not worth my time. I usually do not refund people but seeing as you will need a keylogger after I refund you, you will not be able to have v4 of iSpy which is fine with me :)

PM me your PP address

Razza™ - January 26, 2015, 9:31 pm
