Thread: [\[Antivirus\] Kaspersky Internet Security 2015, for 3 PCs free on Newegg.com](#)

Hey guys, Aura here.

What better Christmas gift can you ask than one of the best paid, if not the best paid Antivirus product there is from Christmas ? Kaspersky Internet Security 2015, for 3 PCs is now free after a \$50,00 rebate on Newegg.com. The limit is one order per customer, so I advice everyone here to "order" their free copy while they can. This is a limited time offer and one of the best you'll ever see.

If you have any questions about the product, let me know and I'll assist you since I've been a user of this particular Antivirus for the past 7 years (at least).

Merry Christmas to everyone.

Eh, I would do it, but I am hesitant because it is after rebate. Last time I did a mail in rebate They said that I didn't send in the label. Since the packing label was already sent to them with my rebate forms I couldn't really do anything about it. Nonetheless, nice find. Sure other people will make use of this.

Yeah, rebates are always iffy. Good deal nonetheless. ?

You of all people should know that rebates are bullshit! They always find a way to not give you the cash.

Kaspersky honors their rebates. Last year I got the max allowed copies xD

Which website did you order from? Both Newegg and Kaspersky honor their deals as far as I'm aware. Never had a single issue with Newegg.

Thanks for sharing this, Aura!

This is a really great find!

Question, is Kaspersky actually worth the money for an Antivirus/Internet security? I was thinking bout getting it for when I build my Desktop PC.

It's totally worth it. It's one of the only Antivirus product that is worth buying. Always at the top of the benchmarks and innovative as well. Been using it for 7 years (even more) and never had a single issue with it.

How is this different from the PURE 3.0? My license is close to expiring and I don't know if I should swap to ESET or just get this.

There's less features in Internet Security than PURE 3.0, but everything you need for essential, first layer protection is available in KIS. PURE 3.0 just have extras that if you don't use, are useless.

Do you still recommend this Aura? What is this rebate thing mean anyway in this context, and what's the catch?

its still recommended and the catch is you have to send the rebate in to get it for free after you already bought it.

I got a deal on it a couple weeks ago for like 20 bucks

Bat Man - December 31, 2014, 6:56 am

Pure is ok....but i would recommend you personally if u need a combination of Antivirus and internet Security then go with Kaspersky internet Security.

Well it looks like the deal ended, congratulations to everyone who got it ?
