Thread: [Help on spreading rat to specific target.](#)

Shadow_Phoenix - December 26, 2014, 12:08 pm

Hi I'm new to these forums . I have a basic knowledge of rats . I need to spread my Rat to one specific target that I have in mind. We currently talk through skype and emails . Any one who can help me. Let me know willing to pay up to 60\$ for this one target on my server and would need to keep them there for atleast 3 days .

Thanks in advance.

DarkMove - December 26, 2014, 12:22 pm

any knowledge about the target OS? if not you can run exploit kit, or send him your stub hidden in a file, if you can't figure this out replay
always enjoy blackhat method :)
first make sure that your RAT actually working and you did get a victim b4,

King Ragnar - December 26, 2014, 12:25 pm

Well if you do have contact to this person is what you could do is to buy a good crypter (Check my Signature) that makes your infected file 100 % FUD. Making it undetected to any Anti-Virus. And you can tell the victim there's this new program that's really cool but it costs and i have it bla bla you want to try it and show some random site with some nice program or something and send him the file and let him run it. He will say it won't work, just tell them oh fuck it then. Infected and done.

Hi thanks for your reply , where can I find a exploit kit ? And I could find out what OS they have .
Would this help?

DarkMove - December 26, 2014, 3:25 pm

you can use metasploit, or you can send him the stub directly or hidden, there is 1000 ways to achieve ur goal

Shadow_Phoenix - December 26, 2014, 4:16 pm

What way would not raise any questions . And do you have a guide ?

xeroic - December 26, 2014, 11:45 pm

Feel free to PM me, especially since you're offering to pay. I have much better advice on how to social engineer your target than the answers above.

The exploit kit response was really funny min0s. You're telling someone that clearly explained he only has basic RAT knowledge to use an exploit kit? You don't think that might take some advanced knowledge of how to actually build a private exploit? And if you meant a public exploit that's even funnier. Oh wait, your the same guy who thinks that you can change two lines of code to make a stub FUD aren't you? ROFL.

knowledge is power, check nanocore thread u may learn something, ive been busy but since nano coder answered you'll ROFL about urself

exploit kit < priv8 exploit
