Thread: [\[Janus\] SQLi challenge #5](#)

JaNuS18 - December 26, 2014, 4:00 pm

Hi folks,

This is my challenge #5 for advanced injectors. Again, it will be a little harder than previous ones ?

~ Task ~

- display version with your name
- find total number of all databases
- find total number of tables in all databases
- find total number of columns in all databases
- go through all databases and find highest and lowest number of tables among all databases
- go through all databases and find highest and lowest number of columns among all tables in all databases
- go through all databases and find highest and lowest number of records among all tables in all databases

~ Site ~

aHR0cDovL3d3dy5wYW50ZXJhLmNvbS5ici9ub3RpY2lhcy92ZXJub3RpY2lhLnBocD9ub3Q9NQ==
(Base64 decode it using online decoder like <https://www.base64decode.org/>)

~ Proof ~

[img]<http://img4.hostingpics.net/pics/43654018c2.jpg>[/img]

~ Rules ~

- you may not use command count() for finding totals (task 1 - 3)
- don't use database name inf***ormation_schema anywhere in your syntax...).
- in your syntax you should use all three relevant tables: inf***ormation_schema.schemata for data about databases / inf***ormation_schema.tables for data about tables and inf***ormation_schema.columns for data about columns.
- your command should work without knowing anything about databases/tables/columns on that site...

Post your syntax to <https://privnote.com> (it is automatically destroyed after reading) and send me link to PM

Let's SQL knowledge be with you ?

~ Solvers ~

- S-x-S
- ra2cod (disqualified from all my challenges)

P.S.

Don't harm the site. ? I choose it only for challenge...

P.P.S

HF is blocking my post because of some commands. Remove * where it occurs

Try also my other challenges for advanced injectors:

hehehe....

Let Me Try again Master ?

Monster Site With Monster Task

Kashmiri_Wolf - July 17, 2016, 11:37 pm

Explain 2nd and third rule please

JaNuS18 - July 18, 2016, 12:18 am

(Jul 17, 2016 11:37 PM)Kashmiri_Wolf Wrote: [\[CITE\]](#) Explain 2nd and third rule please
Rule #2

where database <> "information_schema"

Here information_schema is used as name to get other database name. That is not allowed.

You should get all database names with iterating through information_schema.schemata --> see rule #3

Rule #3

use:

information_schema.schemata for databases

information_schema.tables for tables

information_schema.columns for columns

All three tables should be used for collecting relevant data on each level
(databases/tables/columns)

P.S:

HF is blocking my response with some commands so remove *

Hello, I am interested in learning about advanced SQL Injection, I know the basics and I would like to learn some more advanced techniques, do you have any suggestions of any good resources for learning?

After A Hard Work!!!

Thanks For Challenge Monster ?

JaNuS18 - *August 6, 2016, 7:24 am*

Challenge closed. Some people start cheating. ?????

Is it worth to lose someone's trust just to be on solvers list? ?
