Thread: [\[EXCLUSIVE\]\[TUTORIAL\]How to Hack MyFonts and Get Premium Fonts for FREE!!](#)

zombieman - December 26, 2014, 5:30 pm

Discovered this method myself. Enjoy. Download all your fonts now because MyFonts will likely catch on within a month or two and patch this.

Go to the page of your font. Select "Webfont" at the top.

In firefox (ONLY Firefox) Click Shift + F7 to open the Style Editor.

Copy and paste the text from the third/final stylesheet.

Paste that into a text editor of your choice, making sure word wrap is disabled first.

Delete the CSS links to the fonts you don't need. Leave the lines for the fonts you need.

Enable word-wrap now. Find the partial URL in the text that starts with /v2/ttf?<blahblahrandomshit>

Paste this after the url <http://easy.myfonts.net>. Click save, and save it as <fontname>.ttf

You're done. Enjoy your "free" font. Proof:

Regret - December 26, 2014, 5:31 pm

Lol that's nice dude, good job, will be useful.

zombieman - December 26, 2014, 5:33 pm

(Dec 26, 2014 06:31 PM)Fate Wrote: [\[CITE\]](#) Lol that's nice dude, good job, will be useful.

Thanks. I've been working for the past couple of days trying to find a way to rip these fonts, finally found a loophole. Enjoy!

Ordium - December 26, 2014, 5:35 pm

Wow, thanks OP! Will definitely be using this. How long did this take?

zombieman - December 26, 2014, 5:39 pm

(Dec 26, 2014 06:35 PM)Ordium Wrote: [\[CITE\]](#) Wow, thanks OP! Will definitely be using this. How long did this take?

Probably took me like 4 hours of work total to find this. Chrome wasn't linking me to the font files because MyFont's javascript loaded the CSS and font files dynamically with jQuery (after the page loaded) so it wouldn't show up.

Got it to work finally with Firefox's style editor. I hope it serves you well.

MONSTER - December 26, 2014, 6:06 pm

please explain what the domain "http://easy.myfonts.net" is and why it is not "myfonts.com" ?

Thanks,
-xSyrenity

zombieman - December 26, 2014, 6:10 pm

(Dec 26, 2014 07:06 PM)xSyrenity Wrote: [\[CITE\]](#) please explain what the domain "http://easy.myfonts.net" is and why it is not "myfonts.com" ?

Thanks,
-xSyrenity

Easy.myfonts.net is the domain myfonts.com uses for their CDN (content delivery network).

Basically, it's where they use to host all their paid fonts. So if myfonts.com gets brute-forced or hacked, the hackers won't have access to any of the paid fonts. They're secure on another server and domain (myfonts.net).

MONSTER - December 26, 2014, 6:21 pm

Ok thanks, just thought I'd make sure!

Thanks again,
-xSyrenity

PHANTOM - December 26, 2014, 6:26 pm

lol Thanks for the method very helpful if you want a paid font
Maybe use in the future thanks

MONSTER - December 26, 2014, 6:44 pm

I get the error is not a valid font file? any idea what I am doing wrong?

Thanks,
-xSyrenity

zombieman - December 26, 2014, 6:55 pm

(Dec 26, 2014 07:44 PM)xSyrenity Wrote: [\[CITE\]](#) I get the error is not a valid font file? any idea what I am doing wrong?

Cheers,
-xSyrenity

In the third window, try clicking "Remove properties and personal information." Also click "Unblock" in the first window.

Otherwise, the font file probably needs to be run through a TTF metadata editor to make sure there aren't any special characters in there (you can see a special character in the title in the properties, thats probably where the problem is).

I'll try to find a fix, I just received a new computer for christmas but I still have to finish installing windows.

Raleway - December 26, 2014, 8:36 pm

I got the same special character in my fonts title and when I try to remove it gives me a file access denied and it's asking to get permission from myself what the fuck?

<http://prntscr.com/5lcycy>
<http://prntscr.com/5lcyf6>

zombieman - December 26, 2014, 9:46 pm

(Dec 26, 2014 09:36 PM)v3dracula Wrote: [\[CITE\]](#) I got the same special character in my fonts title and when I try to remove it gives me a file access denied and it's asking to get permission from myself what the fuck?

<http://prntscr.com/5lcycy>
<http://prntscr.com/5lcyf6>

Make sure you're administrator, and click "unblock" on the main file properties window. Then try deleting the properties.

Good luck!

bloodyprince - December 26, 2014, 11:18 pm

Works like a charm ? Thanks a ton OP??

For those who are getting invalid font error while installing, just convert the downloaded font (<fontname>.ttf) to .ttf or any other format by using any font conversion tool (like: <http://onlinefontconverter.com/>). ?

Raleway - December 27, 2014, 12:52 am

(Dec 27, 2014 12:18 AM)bloodyprince Wrote: [\[CITE\]](#) Works like a charm ? Thanks a ton OP??

Thanks for clearing this up for other users. ?

(Dec 27, 2014 11:20 AM)localhost Wrote: [\[CITE\]](#) I got invalid font file error at first, but converted it to a *.otf file using online converters. This solved the error and worked! :)

No problem. Enjoy your premium fonts mate!

bkid1070 - December 27, 2014, 2:01 pm

this is fucking awesome, thanks for the in depth tutorial OP

Goku - December 30, 2014, 11:12 pm

Thanks for the tut! This really helped me!

So I was busy making a mockup of an app for windows/mac. It's called FontThief. ?

Here is a preview: ?

<http://i.imgur.com/EaZpXPL.png>

[I can't post images yet]

You may ask what does it do? ?

Well You need to take the url from the webfont tab of a font you like at myfont.com.

Put it in there, the app will automatically refresh.

And the download button will turn from grey to orange and then you can download your font. the font.ttf will be store in you download folder, from there you can install it. ?

In the inside this happens: ?

- The app goes to the webpage
- takes the correct .css file
- searches for the line that starts with /v2/ttf and cut the end so that it will be a proper url
- puts that code after this easy.myfonts.net
- The font.ttf be downloaded and stored in a temp folder.
- the app converters using the onlinefontconverter.com API the font.ttf to .otf and then moves it to your download folder.
- And then you can install it. ?

My problem is that I can't code. So I need somebody who can help.

Atheism - December 31, 2014, 3:38 am

Not trying to sound like a party pooper, but the domain "easy.myfonts.net" seems to be down or not existing.

Other than this issue, this is a rad tutorial! Nice work mate.

zombieman - December 31, 2014, 8:59 am

(Dec 31, 2014 04:38 AM)Slashy Wrote: [\[CITE\]](#) Not trying to sound like a party pooper, but the domain "easy.myfonts.net" seems to be down or not existing.

Spoiler [\(Click to View\)](#)

Other than this issue, this is a rad tutorial! Nice work mate.

The root domain (easy.myfonts.net) will be down, but once you paste the code retrieved from the CSS file that goes like "/v2/ttf?asdfjhawkejhr" after the URL, you'll be able to download the font.

Good luck!

Also, if the downloaded font doesn't work for you, use an online font converter to convert it to .otf!

Ordium - January 2, 2015, 6:54 am

I get this error.

hatofgrey2 - January 2, 2015, 7:24 am

It looks like this has been patched, the CSS now only has 7 rules instead of ~9 rules. They removed the font, and replaced all the sample text with images. It was fun while it lasted :(sad times yo. I was almost done with my program to download these fonts automatically.

Edit: Still works im an idiot

lamsonx - January 2, 2015, 7:45 am

Thanks Man for the method very helpful

LynS - January 2, 2015, 7:50 am

This is a nice trick bro , thanks for this nigga !

hatofgrey2 - January 2, 2015, 7:58 am

[strike]if anyone can find another site with a similar exploit, then ill modify my program to work with it[/strike]

Edit: Still works im an idiot

program to download the files here: dropbox.com/s/gl4mfyo2ajzf5rl/myfonts.jar?dl=0

The script will add a folder call fonts/, this is where the program will download your fonts to. Just enter the url to the and click the "Download font" button

TheWarHound - January 2, 2015, 2:05 pm

how did you fix this? please share thanks! EDIT, found out how to fix that, but still access denied :/

Vidi - January 2, 2015, 2:48 pm

Very nice tutorial. Looks easy and useful. Thanks for sharing ;)

hatofgrey2 - January 2, 2015, 3:43 pm

(Jan 2, 2015 03:05 PM)TheWarHound Wrote: [\[CITE\]](#) how did you fix this? please share thanks!
EDIT, found out how to fix that, but still access denied :/
use this: dropbox.com/s/gl4mfyo2ajzf5rl/myfonts.jar?dl=0

or this: dropbox.com/s/7bf5z0be1l9pbzs/FontThief.zip?dl=0

the first one is a gui tool I made, the other is a command line tool made by Taibhse. Taibhse is better, but if you dont want to use command line, use mine.

They are jar files you can look at the source code to make sure they are clean. If anyone reading this can read java they could you vouch for these files being clean.

But yea it's not a good idea to run software downloaded from this site. But I will promise you that my software is 100% clean.

(Jan 2, 2015 06:44 PM)iiiAccident Wrote: [\[CITE\]](#) I get the error is not a valid font file? any idea what I am doing wrong?

You will have to convert the font file to a different format. Just google free font converter.

arg274 - January 6, 2015, 12:48 am

Is it just me or does this exploit work for webfonts only? My target seems to have the 'Webfont' tab missing :(

As for the ones which have the 'Webfont' tab, I tried the trick and managed to get the TTF file; But Windows told that its corrupted. Although, checkfiletype.com detected it as a valid TTF font. :/

zombieman - January 6, 2015, 8:09 pm

(Jan 6, 2015 01:48 AM)arg274 Wrote: [\[CITE\]](#) Is it just me or does this exploit work for webfonts only? My target seems to have the 'Webfont' tab missing :(

Yes, it only works for webfonts.

Use an online font converter to convert the TTF to OTF and it will work.

Taibhse - February 18, 2015, 1:03 pm

I'm the creator of font thief, I recently noticed fontThief crashes when attempting to retrieve a font, I havent looked into this in a while so if anyone has any information on what changed on the site or how to adjust this method to work again, please pm me or reply to me here so I can update the program to work again, I'll also likely add a GUI to it aswell for those who dont like command line tools (by god, hackers don't like the command line?).

Nevermind, found the error, its just bad scripts on the site, same method works as always, what went wrong with my program is that htmlUnit tries to run the broken scripts which cause a crash, just had to add a line to tell it to ignore broken scripts.

h?ck?r - February 18, 2015, 2:40 pm

If someone leaks this and it get's patched I will be pissed.

Taibhse - February 18, 2015, 5:40 pm

(Feb 18, 2015 03:40 PM)greyhatphantom Wrote: [\[CITE\]](#) If someone leaks this and it get's patched I will be pissed.

You and me both buddy. Would be very disappointing.

Samk3r - February 19, 2015, 11:58 pm

Nice tutorial dude will be very very usefull thanks !!

KoolTubeHD - February 21, 2015, 10:03 pm

Thanks for the tutorial man! Well Done

??? - March 3, 2015, 9:46 am

I'm on OSX, my text editor isn't working the same as all of yours seems to be. If someone can snag me this font I would be eternally grateful: <https://www.myfonts.com/fonts/hubertjocham/safran/light/>

domondon1 - March 13, 2015, 6:09 pm

i will try this sir, thanks for sharing

RustyShack1e - March 21, 2015, 11:24 pm

thanks for sharing this method, but how do i avoid getting corrupt fonts with the fontthief program?

EDIT: also, does this method work on other sites? there's this font called ks grequex that i've been trying to get from [www.\[.\]anagrafi\[.\]com](http://www.[.]anagrafi[.]com)

EDIT #2: Oh, and how much of the URL do I have to copy? Every time I try, it says something like "missing pair id" or something like that

saseta00 - March 22, 2015, 10:06 am

very good job, thank you for this !

drdoom567 - May 27, 2015, 8:53 am

@Taibhse Great tool. I found that it's only downloading and converting 16 font(files) and then stops with a success message. Can you look into it? The font I have tried is Amsi Pro at myfonts.com

EDIT: I think it's because there are 3 different CSS files and your tool only uses one.

Sidek.Meher - May 28, 2015, 3:34 am

that's a nice job you got there man !

drdoom567 - May 29, 2015, 3:22 am

There is a similar firefox addon that does this quite nice (if it would still work).

[code . google . com/p/web-font-downloader](https://code.google.com/p/web-font-downloader)

Maybe someone can look at the code inside the XPI. It's like a ZIP file.

LosPollosHermanos - May 30, 2015, 9:14 am

Cheers lovely find! Time to drool over some pretty fonts!

r0nix - May 30, 2015, 10:26 am

can't believe this still works, thanks for sharing!

drdoom567 - May 30, 2015, 4:17 pm

got something better myself.

123keshavdoggy - May 30, 2015, 10:35 pm

Nice tutorial totally loved it. Nice trick too.

SunyaMacs - June 5, 2015, 6:05 am

Thank you for this tutorial. I downloaded the ttf and I converted it to otf.

wezio - June 12, 2015, 10:35 am

I get "the requested file is not a valid font type". Have tried adding .ttf and .otf at the end of the file.

ScreamOutLoud - June 12, 2015, 9:13 pm

Thanks gonna dl all the fonts lol

Microlab - June 13, 2015, 2:33 am

Does this still working ?

Weebex - June 13, 2015, 10:27 am

Ive tried this with google and it does work, but it doesnt know how to open the file it downloads. It is a TTF file, but it thinks its just nothing.

ethsa - June 22, 2015, 11:57 am

Looks good, tried it, and it works. Thanks for this man.

fishnuts23 - June 30, 2015, 11:51 am

Can I do this via iPhone?

karnatz - December 2, 2015, 2:01 pm

Hi there everyone:

i just tried to apply the method, but i get this error message:

```
<Error>
  <Code>MissingKey</Code>
  <Message>
    Missing Key-Pair-Id query parameter or cookie value
  </Message>
</Error>
```

Can somebody help me ?

Thanks a lot

GOD OF SARADOMIN - December 2, 2015, 2:21 pm

Looks pretty good thanks man

badboy3 - December 2, 2015, 11:40 pm

This is awesome. I guess more free fonts. Thanks!

bulver51 - December 3, 2015, 3:25 am

Merci pour le partage, je vais y mettre ma pince

ale12386 - December 4, 2015, 3:04 am

Thanks for is man! I will try this later tonight.

whiskynov - December 11, 2015, 3:50 pm

It works but the font is incomplete broh. but thank you.

MikeTheGamer - December 11, 2015, 4:28 pm

Sadly this no longer works as previews are turned into images now, Thanks for your contribution though!

EDIT:

(Dec 11, 2015 04:50 PM)whiskynov Wrote: [\[CITE\]](#) It works but the font is incomplete broh. but thank you.

holy shit thats a really bad gravedig

botinist - December 11, 2015, 6:04 pm

Windows says it's not a valid font when I open the downloaded fonts. Is there a software I can use to view the fonts? or does this technique not work anymore?

Aeit - March 16, 2016, 1:32 pm

Is there a method method to fix missing characters? Because there are other sites with host fast.fonts.net but i cant find correct download http.

Im curious if there is any method left to get nice fonts

G_LO - March 17, 2016, 12:27 am

Very nice work, keep up the good work. Thanks for this tutorial!

hackforums021 - April 13, 2016, 2:32 am

Keep it up guys . You rock

congenital - September 25, 2016, 11:31 pm

Hey guys, could be I'm a little late to the party here but I am getting an "access denied" error on the link. Is this broken or is it me? Thanks for any assistance...

cheers

edit - solved my own question, but...now it sorta works - (didnt read the tutorial properly so I didnt do the word wrap part and so I didn't realise there was more than 1 "/v2/..." segment in the code line - a woff2, woff and ttf. I was copying and pasting the entire thing!) Once I tried just the ttf section it became a recognised download, except the font downloaded has a very limited character set. Same for the woff2 and woff. Anyway to access the entire font?

ferdiok - March 5, 2017, 12:40 pm

Hi still works! Thank you!

Hopsin - March 6, 2017, 1:57 am

(Sep 25, 2016 11:31 PM)congenital Wrote: [\[CITE\]](#) Hey guys, could be I'm a little late to the party here but I am getting an "access denied" error on the link. Is this broken or is it me? Thanks for any assistance...

Probably its patched now... most possible explanation. Have a nice day mate! ?

(Mar 5, 2017 01:40 PM)ferdiok Wrote: [\[CITE\]](#) Hi still works! Thank you!But this thread was published @ 2014. Please avoid grave-digging next time, thank you!

zeb123456 - July 22, 2017, 1:33 pm

Fuck YOU, i did everything right and the ttf file won't open is i can't even install it to use it with photoshop.

Benlechheb was here, this doesn't work anymore, aymane

capt.j - July 23, 2017, 1:23 pm

Absolutely amazing! Thanks for sharing.

Lokotito - *August 23, 2017, 1:40 pm*

Wokrs like a charm (after converting the donwloading file egain to ttf)... thank you!!!

sadly, before read this post, some fonts exist only in that site and was imposible to find it anywhere.
And even if are free fonts (in other sites) in that site they try to sell it.

Best regards.
