Thread: [iFile Photo Transfer](#)

#DPT - December 27, 2014, 6:59 am

Hello Everyone,

Today I jailbroke my iPhone, and I heard I can transfer photos through iFile.

Anyone could tell me how to do that? I would really appreciate!

Thanks in advance, Merry Christmas!

There is an option in Ifile to start a webserver from your iphone and connect to it from you PC, you can then transfer any file you want.

Hope this helps :)

And how do I use this option? I couldn't find it.

With web server option, you would only be downloading single file. It's a lot easier to just SSH into your iPhone using PuTTY, FileZilla, or iFunBox. Navigate here.

Code /var/mobile/Media/DCIM/100APPLE

I just archive the files before and then unarchive them later :)
