Leader(s) of the Sector:[Zayne](#)

[Hooded Robin](#)

About the sector

Today, The Brotherhood takes another step into the world of HackForums by opening up another sector, more specifically a Hacking sector.

The hacking sector's purpose is to collect like minded people who has a passion for hacking. When the news came that Null was to be sold, most of the most recognized hackers throughout HackForums needed a new home, which is where The Brotherhood comes in. The sector could be compared up previous and current groups such as Legion and Null. We aim to become a group that unites people with a passion for hacking within the HackForums community.

Requirements

Applicants with more than 20% Warning Level will not be admitted.

Know what you're doing

Complete sector activities on time with great effort put into them.

No open scam report, deal dispute or community alert.

Application Form

hyhyhhrf3 - December 29, 2014, 1:44 pm

Good luck with the group and have fun

HFblackhats - December 29, 2014, 2:20 pm

good group pretty sure goodies is in this group and he is awesome

D4T4B4S3 - December 29, 2014, 2:27 pm

Profile Link: [Førtune](#)

Time Zone: Eastern European Time Zone (UTC+02:00)

Skillset: Web Hacking [7/10]: I got a lot more to learn, but I really love learning. At the moment I know:

SQL Injection - String/Union/Polygon

Cross Site Scripting

Local File Inclusion

Remote File Inclusion

Learning: Bitshifting (really interesting)

Programming [6/10]: I really love programming. Even though I am not the best at it, my favorite thing is to learn more.

And in this group I am sure I will. I, atm, know:

Python (7/10)

C# (7/10)

C++ (5/10)

Learning: Focusing on C++, want it to be my main language.

What makes you stand out better than others to make yourself more qualified to be a part of this sector?: Pretty much nothing. However, my ambition could be one. I love learning new things, and if I am after something, I won't leave it until I achieve what I want.

Any certifications?: Don't have any certifications, am 17, at college.

Proof of work or knowledge: Eh well, I actually can't think of any proof at the moment.

Anyway, hopefully I can be a part of this awesome group. Would be awesome to learn more!

Fortune

Roger Waters - December 29, 2014, 6:24 pm

Posting here to confirm that this is now a sector in The Brotherhood and that Zayne and Hooded Robin are allowed to invite members from this recruitment. Good luck to everyone that is applying, looking forward to seeing a few new faces.

Aakash Choudhary - December 29, 2014, 11:12 pm

Profile link: <https://hackforums.net/member.php?action=profile&uid=2506684>

Time Zone: IST

List your skillset: Web Programming Language --->

HTML/HTML5,CSS/CSS3,JS(Basics),PHP(Basics)[Learning PHP+MySQL these days]

Hacking --> Web Hacking(SQLI[Mostly],XSS,LFI,RFI,SSI,RCE(Only did in my LAB)) Hash Cracking[Thanks to Hoodid Robin and rdot.org from where i learned Hash Cracking]

What makes you stand out better than others to make yourself more qualified to be a part of this sector?: With my knowledge i helped a lot of my friends and members.And i always eager to learn new new things. Hate Defacing[Waste of time].Share my knowledge and stuffs which i have to all
Any certifications?: CEH,RHCE

Proof of work or knowledge: I made some Threads in HF for help Newbies mostly in SQLI Section. Also I am mostly active in SQLI Section where i help many members.For proof visit my profile :D

I will be very happy to be part of this group. I will share my knowledge and I want to increase my knowledge in Hacking or in Coding. Thanks. And I am very excited to join this group as Leader Member of this Group [Zayne & Hoodid Robin] is very talented
Thanks in advance ?

.THC - December 30, 2014, 12:51 am

Profile link: <https://hackforums.net/member.php?action=profile&uid=2547017>

Time Zone: EST

List your skill set: Social Engineering, Doxing, Experimented with Sql Injection, RATs/ JDB, SET, PERL scripts, HTML Basic, GFX, VFX

What makes you stand out better than others to make yourself more qualified to be a part of this sector?: This all comes extremely naturally to me so I pick up computer based things quickly. I get shit done and don't waste time, I wouldn't disappoint.

Any certifications?: Comp TIA A+, Mobile Phone Forensics

Proof of work or knowledge: I don't really know how I would show proof other than showing you first hand.

HAX ME IM FAMOUS - December 30, 2014, 4:19 am

Put some more effort into your application guys, this is a chance you don't wanna miss out on. Hope to see some skilled individuals being recruited.

Hazy - December 30, 2014, 4:46 am

Nice to see The Brotherhood also accepting users interested in Hacking.

Good luck to everyone who applies, haven't really seen any apps which stood out.

Hooded Robin - December 30, 2014, 7:09 am

Looking for members who know or have their own subtle area of expertise as well as a burning desire to push themselves to learn more while working as a part of this great team. If interested please apply!

JOKER - December 30, 2014, 8:16 am

Profile link: [Joker](#)

Time Zone: London GMT(+0)

List your skillset:

I've been involved with Pentesting and Cybersecurity for the past few years, initially it started out with a general interest in computing sciences then branched out. I've have a general understanding of a range of concepts related to hacking, developed further through experience, skills include:

Network pentesting: So first and foremost enumeration, but also ARP poisoning, DNS cache poisoning, DCHP spoofing, SSL strip, WIFI attacks & familiarity with tools such as the Metasploit Framework, Ettercap and so on.

WebApp pentesting: Enumeration and vulnerability assessment with applications such as Nmap, Vega, Webshag. Knowledge in SQLi, understanding of XSS, hijacking web session cookies.

Other concepts including buffer overflows, shellcode, basics of cryptography. Familiarity with hashes, password cracking w/ dictionaries and rainbow tables.

Experience with OWASP & OSSTM methodologies.

Knowledge with fields that I personally find extremely relevant and helpful to understanding include knowledge in computer systems, computer memory, networking protocols (TCP/IP & UDP) and the OSI model, programming in C/C++ and familiarity with SQL & PHP syntax.

What makes you stand out better than others to make yourself more qualified to be a part of this sector?:

I have passion towards computer systems and hacking. Unlike many on HF I am not money driven, looking for easy jackpots - I like to think I hold the true 'hacker' ethos as described by Jon Erikson (author of books including Hacking: The Art of Exploitation):

Quote:The essence of hacking is finding unintended or overlooked uses for the laws and properties of a given situation and then applying them in new and inventive ways to solve a problem—whatever it may be.

As a result of this passion I go beyond the normal tutorials and look to be creative, I'm not afraid to get stuck into books where need be and I'm always on board to not only help others but further my learning. I also have experience doing Pentests for small start-up businesses and websites - and the necessity of enumeration and reconnaissances when performing an attack is often forgotten nowadays, as well as post-exploitation.

Any certifications?:

I don't hold any official certifications, but then again neither do some influential hackers; Anch who spoke on Traffic at DEFCON 22 comes to mind.

Proof of work or knowledge:

I've done a few tutorials on HF and helped around the beginner section - but I think it is widely known that purely knowledge based 'TUT's don't get much attention on HF, but hopefully that would change in this group's board. I've read a lot of books on the topic, and continue to read more so I don't mind sharing those if required. Some of my tutorials include:

[\[TUT\] Diftnet MitM Attack To Capture Live Image Traffic \[TUT\]](#)

[\[TUT\] WinRAR Extension Spoof \[TUT\]](#)

[\[TUT\] Beginner's Guide to Vulnerability Scanning with Vega](#)

Time Zone: PST

List your skillset:SQLi

Keylogging

Ratting

basic vb.net

basic C#

Basic Python

Basic Web Development

Urge and desire to learn new things

What makes you stand out better than others to make yourself more qualified to be a part of this sector?: I always want to learn new things and exploit things that haven't been done, regardless if I get caught.

Any certifications?: Studying for my A+ certification through high school classes if that counts.

Proof of work or knowledge: Can't think of any really, Will edit if I can think of a way to show proof.

-zERaIT - January 1, 2015, 1:13 pm

The Brotherhood is a great group and I'm sure the hacking sector is in great hands with Zayne & Hooded Robin leading it.

If you've a passion towards hacking I'd suggest you to apply before this is getting closed.

HIGH PAID FELLA - January 1, 2015, 3:22 pm

I might apply sooner or later, looks nice.

SIM-2015410 - January 1, 2015, 6:35 pm

Profile link: [?eshCollider](#)

Time Zone: UTC + 12:00 (New Zealand)

List your skillset: I have really good general knowledge in many areas. I would say the only drawback to my knowledge is my lack of real life experience - I have mostly only read books and tutorials. I really would love to get involved in practical application of my knowledge.

I have a good understanding and knowledge of Web attack vectors such as SQLi, LFI/RFI, XSS, etc.

I am familiar with the common hacking tools such as Metasploit, vulnerability scanners, sniffing/spoofing tools, etc.

Understanding of many exploit techniques such as buffer overflows, I know a lot about network penetration, and I am currently participating in a course on cryptography. Other than specific hacking knowledge, I also have very good general computer skills and have experience with both windows and unix based environments, as well as networking.

What makes you stand out better than others to make yourself more qualified to be a part of this sector?: My huge willingness to learn and be active. I jump at any opportunity to learn more, and am also willing to share my knowledge with others (as seen in my tutorials). I am also intelligent and a very fast learner, which are good traits to have in this area. For example, I am currently sitting university calculus papers as a 17 year old, and already got A+ in both 2 papers I sat in 2014 (when I was 16). As well as my intelligence, I has a passion toward the area. I have been involved with computers for years, and plan to make it my career. I don't do anything for money, though, but rather for learning and the ecstatic feeling that pwning a box brings :)

Any certifications?: Unfortunately I have no formal qualifications, but have spent numerous hours

reading course material from such qualifications, watching defcon and blackhat briefings, reading books and tutorials, and more. As I said, I love to learn, and penetration testing/hacking is an area where I will never know everything - so I can just keep learning. That is why I love it so much, and want to join the brotherhood hacking sector. I feel I would be a great asset to the group. Certifications do not necessarily dictate a skilled hacker though, as hacking is often about thinking methodology and being able to think outside the box.

Proof of work or knowledge: My tutorials are the most accessible proof of knowledge/work. I have written many tutorials on HF for beginners including a mega tutorial covering the basics of many areas of hacking. My tutorials:

[Mega hacking tutorial](#) (the biggest introduction to hacking on HF, although you shouldn't base my knowledge only on this - it was designed as an introduction only)

[DNS Spoof to steal passwords](#)

[How to clone a website](#)

[Embedding a backdoor in a PDF file](#)

[WiFi Cracking Tutorial - PART 1](#)

[WiFi Cracking Tutorial - PART 2](#)

[Metasploit Tutorial Part 1 - INSTALLATION](#)

[Metasploit Tutorial Part 2 - EXPLOITING IE8](#)

[Metasploit Tutorial Part 3 - EXPLOITING WINDOWS XP](#)

[Easy DOS attack on a wireless router](#)

[Remote viewing a webcam and microphone with Meterpreter](#)

[Encode a payload with metasploit](#)

[Hack or crash windows 7 with a simple shortcut file](#)

[How to spread a RAT](#)

[Scan for vulnerabilities in a webserver](#)

[Monitor Network Activity | Watch URLs visited](#)

As well as hacking, I also love coding. Hacking and coding go extremely well together as you know. Proof of my coding ability can also be seen in my threads...

[Coding Helpdesk](#)

[Ultimate Java Tutorialy](#)

...As well as my placement on the Omnicoin team.

[OmnicoinJ and Android wallet development](#)

[Official Omnicoin MyBB plugin development](#)

Other proof of my knowledge is my acceptance into other groups already, such as some of the unofficial pentesting/hacking groups on HF (Insight, Aurora, Academics), and some of the official groups (Specialists, and I was in Null until there was a conflict between groups as you know)

I hope you accept me. The BH Hacking sector looks really great, and has some of the members I respect the most in it - namely you (Zayne), Hooded Robin, Goodies (who is actually in the pentesting sector), and a few others I met in Null. Thanks for taking the time to read my application ?

Time Zone: EST (USA)

List your skillset: hacking, cracking, and jacking

What makes you stand out better than others to make yourself more qualified to be a part of this sector?: i jack the best and the most on this site. catch my drift? ??

Any certifications?: yes. im certified by jackers anonumoose

Proof of work or knowledge: um add me on skype to see.

hahdbwoannniabs - January 5, 2015, 8:07 pm

Profile link: <https://hackforums.net/member.php?action=profile&uid=2543411>

Time Zone: US Central

List your skillset: The usual web application exploitation shit (SQLi, XSS, CSRF, LFI, RFI, RCE, etc) but obviously still learning. Also currently learning about software and kernel exploitation.

What makes you stand out better than others to make yourself more qualified to be a part of this

sector?: I'm familiar with x86 Intel Assembly and C, most users can't say that.

Any certifications?: Currently working on achieving the CompTIA Security+ certificate

Proof of work or knowledge: I got a remote shell on Avast's website a few months ago, I wish I was able to prove it though. Didn't take any screenshots/save anything. This is probably the most significant thing I've done in terms of hacking something.

?Salty? - January 6, 2015, 7:43 am

Profile link: <https://hackforums.net/member.php?action=profile&uid=2470858>

Time Zone: I live in Denmark, so GMT +1.

List your skillset: Well, I wouldn't say I am any sort of advanced hacker. I love learning, hence I want to be apart of TB. Currently I have a mentor who has taught me how to do SQL-injection with tools. Python and SQLMap to be exact. In the upcoming days he will teach me how to use Urllib as an extra tool and teach me how to use manual SQL-injections. I am so thankful for him teaching me this, as it has helped me a lot.

I would love to expand my knowledge about hacking. I don't want to only expertise in SQL-injection, I want to know everything, I want to be, well, sounds skiddy, but; a professional hacker. No, I'm not looking to be some black-hat person that hacks himself into banks and other highly illegal stuff, I want to be a white-hat person, who helps out people find vulnerabilities and help them increase their security.

What makes you stand out better than others to make yourself more qualified to be a part of this sector?: Well, I am truly myself, I speak my honest opinion and I love learning. I guess what makes me unique is that I am very dedicated to things I do, I do not just give up. I fight till the last candle is blown out. I want to learn everything that I can, as it may help my path in the future.

What makes me unique is, that instead of me trying to be someone to get something, I'm myself and if a person can't appreciate that well, then I'll just keep to myself. I don't like causing unnecessary drama.

Any certifications?: Yes, I have the CCNA 1 certificate which I got when I took my basic course for IT-infrastructure.

Proof of work or knowledge: Well, I don't want to show any proof of what I have accomplished the last few days, as I don't feel it's something I have done myself, it's either been public exploits supported by my mentor, or it's been my mentor legitimately telling me everything. I would love to take part in fun games in TB, where we could like set up a server, website or anything else and try to see who could gain access to this. As soon as someone got the answer/perhaps a few, one of the people who got through can make a small/detailed guide as to how he did it, so other people can learn from it.

I know this was sort of a messy application, but I just wanted to explain everything I had on my mind, I want to learn and I hope you'll take me in for that.

Regards,
Salty

LunarCP - January 7, 2015, 5:14 pm

Profile Link

[-Vin](#)

Timezone

Eastern Standard Timezone (-05:00 UTC)

Skillset

What I specialize in is PHP and PDO security. This is the security measures used to make database communication more secure and invulnerable. After working so much with database administration and different types of security, it has taught me how to become better at SQLi, which is basically finding vulnerabilities in scripts to gain access to a database or to the scripts information. I have been working with this for many years now and would say that I am pretty far advanced in this field.

What makes you stand out better than others to make yourself more qualified to be a part of this sector?

One of the main things that makes me a more viable candidate for this sector is that I have been working with this field for many years, setting me ahead of those who are new to the field and just looking to expand their general knowledge. I believe another strong-point that I have over others when applying to this sector is my level of maturity and understanding of advanced hacking methods.

Any certifications?:

Graduated (2013) - Introduction to Computer Science (88%)

Graduated (2014) - Advanced Security Management (94%)

Proof of work or knowledge:

I have worked for many different companies as a back-end developer including SkipQ, FPDuffy and HGF. This shows that I have knowledge of back-end development including development in PHP and Database Management. If you need to contact them for proof of working there, feel free to PM me.

If you have any questions or concerns about my application feel free to ask!

Profile link: <https://hackforums.net/member.php?action=profile&uid=1073426>

Time Zone: UTC +1

List your skillset:

Web Development (HTML, JS, PHP, CSS)

Web Penetration Testing:

SQLI (Union, String, Polygon Error Based, Bitshifting Blind (Basic understanding)

XSS

CSRF

RCE

LFI

RFI

How a hash collision attack work (lol)

I can also identify various programming flaws which may or may not be usable for malicious

reasons.

What makes you stand out better than others to make yourself more qualified to be a part of this sector?:

I actually know what's going on behind the scene a lot of people on HF learn SQLi without knowing SQL.

Any certifications?: No

Proof of work or knowledge:

I rarely post my findings or programs due to having a really nasty habit of postponing the final stages but you can checkout my blog here <http://nullprojects.com> and I managed to find a tutorial that I made about setting up a local vulnerable environment for SQLi and learning the basics <https://hackforums.net/showthread.php?tid=4409100>

Time Zone: GMT

List your skillset: SQLi (like any skid can) (incl. Union, Time, General Time, etc etc), XSS (obviously. Who can't?), CSRF, LFI, LFD, RFI, Buffer/Stack Overflows (incl. Heap BoF and bypassing SEH) for code execution, Format String Exploitation (incl. Direct Parameter Access), Race Conditions, Integer Overflows and Underflows, ASLR Bypass, CRLF Exploitation, Coldfusion Exploitation (like anybody can), Windows Dynamic Link Library Search Order Exploitation, RFID Exploitation, Linux Privilege Escalation, Windows Privilege Escalation, MITM Attacks (incl. DNS hijacking and ARP Cache Poisoning, Network Forensics, Hardware Forensics and Anti-Forensics (incl. File Recovery), Return Oriented Programming, Software Reverse Engineering, POODLE SSL Exploitation, Shellshock Exploitation. However, obviously just that alone is not enough, what I should also list are the programming languages I use: C, C++, ASM (Intel Syntax) (and by extension, my own shellcode), Python, PHP, Pascal, SQL.

What makes you stand out better than others to make yourself more qualified to be a part of this sector?: Most people here see breaking into a system as simply exploiting vulnerabilities in web applications, however I understand that there are far more options than just using website exploitation to get into a server. I, personally, prefer to work with the low-level side of programs, for example the server itself. If the server itself is insecure, the web application does not need to be exploited.

A lot of people here have false misconceptions on what can and can't be done, simply because some other person on the forum says it can't be done (for example, hacking someone after getting their IP, or hacking someone through skype (did some reverse engineering on MSNP24 recently and saw how vastly insecure it is)). I don't want these misconceptions to be continually fed to newcomers who want to learn.

Any certifications?: I can't afford to take any at the moment, however from what I've seen of what's available (CEH, for example) there's not much I could learn from the courses on top of what I already know.

Proof of work or knowledge: I guess the following would be all I have under this alias:

<https://hackforums.net/showthread.php?tid=3723345>

<https://hackforums.net/showthread.php?tid=3898935>

<https://hackforums.net/showthread.php?tid=3944640>

<https://hackforums.net/showthread.php?tid=3553737>

<https://hackforums.net/showthread.php?tid=3646069>

Simply™ - January 8, 2015, 2:28 pm

Profile link: <https://hackforums.net/member.php?action=profile&uid=2244528>

Time Zone: Central Standard (-6:00)

List your skillset: RATS, Keyloggers, Know how to SQLInject, but I've never put time into doing it, Xbox Modding (don't own an rgh or jtag but I have more knowledge on them than most people, DDoSing (even though it's not really hacking)

What makes you stand out better than others to make yourself more qualified to be a part of this sector?: I don't think I really stand out, but I love participating in chats and discussions about same interests. I've only been a member of HF since April, but I've learned a lot and applied it. For me, I would consider hacking a hobby not a skill. I started learning and getting into RATs about a week ago, and I've been working with spreading keyloggers since I joined HF. I think I could offer TB a lot.

Any certifications?: No. I teach and learn by myself.

Proof of work or knowledge:

Keylogger logs:

RAT slaves: had over 60 when I got home but I guess a lot of people disconnected.

Pixel5816 - January 9, 2015, 12:16 pm

Profile link

<https://hackforums.net/member.php?action=profile&uid=2350431>

Time Zone

GMT-0 (UK)

List your skillset

PHP, Java, web development (HTML,CSS,JS), basic Python

What makes you stand out better than others to make yourself more qualified to be a part of this sector?

I am determined.

I started off with nothing but a profound curiosity about programming and a driving desire to learn. I love to help people where I can.

Any certifications?

I am self taught but will certainly study a form of programming in the near future.

Proof of work or knowledge

Yep! Here's a file with a selection of projects in it. Don't forget to skim over the README files!

- message me for the download link -

Time Zone:

GMT +1

List your skillset:

Social engineering, RATs, basic hacking, sql, python, php and html, Kali Linux, high knowledge when it comes to anonymity (VPN, TOR, socks5...), manhunt

What makes you stand out better than others to make yourself more qualified to be a part of this sector?:

Check my previous post activity by sectors or take a look at my threads. I know what I'm talking about and help others without asking for something in return. I don't spread information unless I'm sure I'm right and the information is useful and haven't been said before.

Any certifications?:

No. But probably going to be a speaker at a huge upcoming event.

Proof of work or knowledge:

A hacker who gives out proof of his work, is no hacker.

Gee4rce - January 9, 2015, 9:17 pm

Profile link: <https://hackforums.net/member.php?action=profile&uid=895256>

Time Zone: CET

List your skillset: XSS, SQLi, RCE, RFI/LFI... the webstuff. I am just a scriptkid, still learning a lot, but planing to be master hax one day : D

Long term member, friendly, mature and willing to help. But i wouldn't say i stand out here that much : /

Any certifications?: None, all selftaught, working for an IT-Security Company

Proof of work or knowledge: XSS'ed and SQL injected 5 of Alexa Global Top10 websites. Proof will be shown to Brotherhood staff.

Hope to see you soon :)

Thanks and Greetings, Gee.

roleeswagger - January 10, 2015, 7:55 am

Profile link: <https://hackforums.net/member.php?action=profile&uid=2050799>

Time Zone: GMT+1

List your skillset: Networking(pentesting,exploiting vulnerabilities,spoofing & sniffing),doxing,Web vulnerability finder(XSS,sql,code injections..),coding(Object-oriented programming and non..Java,C/C++),web languages and site management (html,javascript,sql,css,cms),Linux,VideoEditing,microcontrollers(arduino,raspberry) and 3D Printing

What makes you stand out better than others to make yourself more qualified to be a part of this sector?: Learning fast skills and i always set goals so i always have something new to learn..

Any certifications?: Cisco it essentials(kind of starting point),ccna discovery,r&s(course),linux essentials(course)..planning to do more cisco stuff related

Proof of work or knowledge: a nice way to show proof could be an interview on irc

jojofry1294 - January 10, 2015, 9:10 am

Profile link:

<https://hackforums.net/member.php?action=profile&uid=2545647>

Time Zone:

EST – Eastern Standard Time (UTC Offset: UTC -5:00)

List your skillset:

I am working on botnets atm but i do use my ratting skills quite often. I can code a little lua, c++ and html. I understand sql, python and php, others like .bat and command line stuff i used for a long time and there a lot of others i cannot think of at this moment.

What makes you stand out better than others to make yourself more qualified to be a part of this sector?:

There is not much for me to show but I have the drive to do better and keep learning. I will do the best to my abilities and not leave something half done.

Any certifications?:

No, I am still in grade school so I don't think I am even able to get them yet.

Proof of work or knowledge:

I would love to be able to show something but i don't really have anything i made from scratch in the hacker world to show. I made a lot of stupid little things and at this moment i am just trying to expand my knowledge.

I am really into learning and would love to learn with other people.

Fellow HF Member,
Joe

Xorex - January 10, 2015, 12:25 pm

Profile link: <https://hackforums.net/member.php?action=profile&uid=1430528>

Time Zone: GMT -8

List your skillset:

I have many variations of skillsets. I try to get a general understanding of the important factors, and then dive in to the small factors. Decryption - I've been cracking hashes since 2012, and I have been compiling my wordlists ever since. I don't use one big wordlist for everything, my wordlists right now are around 250MB and crack most hashes based on where they're obtained. For example, I have different wordlists for English Forums, Russian Forums, Gaming Forums [Runescape], etc.

The wordlists are generally the most common passwords and they tend to be around 250MBS - 300MBS.

Website/Forum Hacking - I've been experienced with SQLi, XSS, LFI.

For SQLi, I have a general knowledge and know how to work with SQLi Sites, same with XSS. Though LFI is something I'm trying to research at the moment as it sparked my interest. I have a really basic knowledge of LFI, and I'm trying to learn more as I go.

Pentesting/Forensics - I have been lately studying for my CompTIA Security + so I've been studying a lot of penetrating and forensics lately. I have the knowledge needed for the exam, though I'm trying to excel above and beyond. I have knowledge about preventing attacks, though I'm still trying to learn how to embrace the attacks. It's one thing knowing how to prevent attacks, though another knowing how to do the attacks.

Website Development - I feel my strongest suits are Website Development and Decryption. I have

been developing websites for about three years, and I work with multiple frameworks. I've been recently learning how to use PHP for more "blackhat" in order to help me on my certification exams.

What makes you stand out better than others
to make yourself more qualified to be a part of this sector?:

I'm trying to gather as much knowledge as I can and am willing to gather the knowledge. I am really hard working and willing to learn as much as I can. I also can help out members with the certain skillsets which I can contain in exchange for other knowledge.

Any certifications?: Currently going for my CompTIA Security +

Proof of work or knowledge: I've private messaged you my proof of knowledge.

Thanks for the opportunity!
