Thread: [\[Window Logger\] Logs only windows needed \[Window Logger\]](#)

jcbullet - December 29, 2014, 2:15 pm

Im working on a project in c#

uses a simple keyboardhook then looking to filterout the space,@ etc.

Right now it hooks the window title, Interestingly it picks up on browser window titles aswell.

It compares the string to match what we want then logs only for 30secs to minute,Saves then posts to webpanel.

Currently using timers, is there a better method in this?

Is no one interested in developing this with me?

I think alot of people aren't intrested because there are ALOT of keyloggers.

Xkssjdo - November 17, 2024, 2:12 pm

it working now ? it been 8 years
