Honestly I'm not impressed. You've already release other themes better than this one, and the only way this is relative to xbox is the green color. Needs improvement, way to simple.

Somebody tell me this .

"Instead of creating 3 different button controls just allow user to change colour in one control."
:) Your Expo Theme is better than this.

Xbox Theme

Expotheme

Instinct Theme

Come on man they are almost identical apart from the colors. Stick to the ExpoTheme and improve that one instead of releasing this.

Old theme, recolored.

No offense, but it's nothing special...
