Thread: [How To Create A Campaign Within Your Program](#)

270z - December 30, 2014, 6:45 pm

Okay Guys, I have asked many questions here and would like to take a moment to contribute back to the forum now!

Some pro's here might think this was coded poorly, but it works :D

What the form would look like:

1: When the program is launched you must create folders and txt's for your program.

```
Code If (Not System.IO.Directory.Exists("C:\pasteboy")) Then
    System.IO.Directory.CreateDirectory("C:\pasteboy")
End If
HurricaneProgressBar1.Increment(34)
If (Not System.IO.Directory.Exists("C:\pasteboy\campaigns")) Then
    System.IO.Directory.CreateDirectory("C:\pasteboy\campaigns")
End If
HurricaneProgressBar1.Increment(34)
If Not System.IO.File.Exists("C:\pasteboy\settings.txt") Then
    System.IO.File.Create("C:\pasteboy\settings.txt").Dispose()
End If
HurricaneProgressBar1.Increment(32)
```

2: Add the settings or inputs for the campaign and the listview

4: Make it add and save

```
Code Private Sub HurricaneButton2_Click(sender As Object, e As EventArgs) Handles
HurricaneButton2.Click
    Dim Campaign As New ListViewItem(txtbxName.Text) 'Name
    Campaign.SubItems.Add(txtbxKW.Text) 'KW
    Dim type As String
    If rndmChk.Checked = True Then
        type = "Random"
    Else
        type = pastetypeCombo.Text
    End If
    Campaign.SubItems.Add(type) 'Type
    Dim expire As String
    If expirerndmchk.Checked = True Then
        expire = "Random"
    Else
        expire = expireCombo.Text
    End If
    Campaign.SubItems.Add(expire)
    ListView1.Items.Add(Campaign)
```

```

If (Not System.IO.Directory.Exists("C:\pasteboy\campaigns\" & txtbxName.Text)) Then
    System.IO.Directory.CreateDirectory("C:\pasteboy\campaigns\" & txtbxName.Text)
Else
    MsgBox("Error: Campaign Name Already Exists!")
End If

If Not System.IO.File.Exists("C:\pasteboy\campaigns\" & txtbxName.Text & "\settings.txt")
Then
    System.IO.File.Create("C:\pasteboy\campaigns\" & txtbxName.Text &
"\settings.txt").Dispose()
    Dim file As System.IO.StreamWriter
    file = My.Computer.FileSystem.OpenTextFileWriter("C:\pasteboy\campaigns\" &
txtbxName.Text & "\settings.txt", True)
    file.Write(txtbxName.Text & ":" & txtbxKW.Text & ":" & type & ":" & expire)
    file.Close()
Else
    MsgBox("Error: Campaign Name Already Exists!")
End If

ListView1.Items.Clear()
Try
    Dim Dirs() As String = Directory.GetDirectories("C:\pasteboy\campaigns")
    For Each Dir As String In Dirs
        GetCampaign(Dir)
    Next
Catch ex As Exception
End Try

```

End Sub

what this will do is create a campaign if one of that name does not already exist. If it doesn't then it will create a folder containing the settings of the campaign. This is so later in the program the folder can hold other stuff for that campaign like another txt with proxies or whatnot ;)

5: Make it load the list of campaigns

NOTE- I added this many places throughout the code of my program but I will show you one place to make it simple to understand

This is that little refresh picture on the bottom right of the listview ;)

```

Code Private Sub PictureBox1_Click(sender As Object, e As EventArgs) Handles PictureBox1.Click
    ListView1.Items.Clear()
    Try
        Dim Dirs() As String = Directory.GetDirectories("C:\pasteboy\campaigns")
        For Each Dir As String In Dirs
            GetCampaign(Dir)
        Next
    Catch ex As Exception
    End Try

End Sub

```

6: Now to let the user Edit the campaign.

You can do double click or selected index changed for this part, I chose index changed because it is faster for me when testing xD

Code Private Sub ListView1_SelectedIndexChanged(sender As Object, e As EventArgs) Handles ListView1.SelectedIndexChanged

```
txtbxName.Enabled = False
```

```
txtbxName.Text = ListView1.FocusedItem.SubItems(0).Text
```

```
txtbxKW.Text = ListView1.FocusedItem.SubItems(1).Text
```

```
If ListView1.FocusedItem.SubItems(2).Text = "Random" Then
```

```
    rndmChk.Checked = True
```

```
    expireCombo.Text = ""
```

```
Else
```

```
    rndmChk.Checked = False
```

```
    pastetypeCombo.Text = ListView1.FocusedItem.SubItems(2).Text
```

```
End If
```

```
If ListView1.FocusedItem.SubItems(3).Text = "Random" Then
```

```
    expirerndmchk.Checked = True
```

```
    expireCombo.Text = ""
```

```
Else
```

```
    expirerndmchk.Checked = False
```

```
    expireCombo.Text = ListView1.FocusedItem.SubItems(3).Text
```

```
End If
```

```
End Sub
```

Then The edit button itself:

Code ListView1.Clear()

```
Dim Campaign As New ListViewItem(txtbxName.Text) 'Name
```

```
Campaign.SubItems.Add(txtbxKW.Text) 'KW
```

```
Dim type As String
```

```
If rndmChk.Checked = True Then
```

```
    type = "Random"
```

```
Else
```

```
    type = pastetypeCombo.Text
```

```
End If
```

```
Campaign.SubItems.Add(type) 'Type
```

```
Dim expire As String
```

```
If expirerndmchk.Checked = True Then
```

```
    expire = "Random"
```

```
Else
```

```
    expire = expireCombo.Text
```

```
End If
```

```
Campaign.SubItems.Add(expire)
```

```
System.IO.File.Delete("C:\pasteboy\campaigns\" & txtbxName.Text & "\settings.txt")
```

```
System.IO.File.Create("C:\pasteboy\campaigns\" & txtbxName.Text & "\settings.txt").Dispose()
```

```
Dim file As System.IO.StreamWriter
```

```
file = My.Computer.FileSystem.OpenTextFileWriter("C:\pasteboy\campaigns\" &
```

```

txtbxName.Text & "\settings.txt", True)
file.Write(txtbxName.Text & ":" & txtbxKW.Text & ":" & type & ":" & expire)
file.Close()

ListView1.Items.Clear()
Try
    Dim Dirs() As String = Directory.GetDirectories("C:\pasteboy\campaigns")
    For Each Dir As String In Dirs
        GetCampaign(Dir)
    Next
Catch ex As Exception
End Try

```

Now with this made the user can select their campaigns through a dropdown as such:

This is where my code gets really sketchy...

Code HurrycanComboBox2.Items.Clear()

```

Try
    Dim Dirs() As String = Directory.GetDirectories("C:\pasteboy\campaigns")
    For Each Dir As String In Dirs
        HurrycanComboBox2.Items.Add(Dir.Replace("C:\pasteboy\campaigns\", ""))
    Next
Catch ex As Exception
End Try

```

I say that it is sketchy because if there are alot of campaigns it takes a little while to load the campaigns so you might need to work on that part. But for the purpose of the code I think I did pretty well on this ?

I hope this helps some of you and if you have any questions feel free to ask!

Here are a couple pictures of it:
