Thread: [Titans // Web Developer Recruitment](#)

Hydra - January 1, 2015, 10:51 pm

Titans is looking for web developers who have a lot of experience and knows a wide range of languages which are used for making websites/web applications. Recruitment applications get boring and don't show your skill or creativity so we will be hosting a contest for all the web developers out there who meet our needs.

You MUST know(Not fluently, just enough):HTML(5 Preferred)

CSS(3 Preferred)

JS

PHP

Extra languages(Optional but a +1 if you know any of them):jQuery(JS)

Python

Java

Flash

Unity 3D(Game Engine)

If you know the 'MUST know' languages above, continue to read.

Objective:

Design and create a working website for Titans.

Rules:You may not use anyone else's work;

You may not use any templates, front-end framework(Bootstrap, etc.), pre-made stylesheets(CSS/LESS/SASS), and anything else that is NOT your own work;

You CAN use CSS and JS resources that allow you to do animations or something similar to that. These resources must be open-source as well, no need to pay for something extra. You still cannot use pre-made stylesheets. Ex. animate.css or wow.js

You may not use previous work of yours, must be from scratch(Obviously your coding for some parts will be the same, but as long as you didn't C&P, that's fine).

*As you can hopefully tell, we just want to see your skill without the need of using someone else's code to make the website look 'pretty'.

Required Materials: Home Page About Section

News/Announcements Section

Members Page A list of members

Buttons to profile link, Skype ID Add, etc

You may add more pages as you deem fit, this should be your own custom website, I don't want to impose any restrictions. Feel free to put a projects page, contact us page, anything relative. You may also use filler text (Lorem Ipsum, Fake Names, etc.) for when you don't know what text to put.

Any questions, just contact me and I will help you to the best I can.

Picking a Winner:

We will be voting within the group for the coders who should be recruited based on a few criterias:
Design

Ease of Use

Speed and Loading Times (All entry websites will be on the same server and tested through that - Many images vs. CSS3 affects load times)

Code Source (Code Organization like indenting, method usage like `<link rel>` vs. `@import`)

Features of the website (Responsive, smooth transitions, etc)

We may also make a public vote, which if made, will allow us to pick between ties or uncertain applicants.

On top of all of this, we will still look at your profile and make sure you are a member who meets our standards. If you win, you will earn a spot into Titans but you will need to contribute. You will be asked to code a Photoshop designed website for us, very basic, nothing heavy.

Applying:

Code your website and .zip your files together and upload to a website like [Zippyshare](#) or [MEGA](#). You can then PM me the website along with a screenshot of the website if you're able to do so.

We will end the contest when we feel as we have had enough entries. You don't need to overdo

this, just show us that you're capable of coding a website and have the skill and creativity to make something good.

Good Luck!

Dorrance - January 1, 2015, 10:52 pm

Good luck to all applicants shoutout to the homie iHydra.

MineSQL - January 1, 2015, 10:59 pm

Good luck with applications. Personally, i wouldn't do this because any decent developer knows that this is not worth the time. Considering you want everything custom. If you find a decent developer to do this for you (basically for free), then god knows you have been blessed.

Hydra - January 1, 2015, 11:01 pm

(Jan 1, 2015 11:59 PM)MineSQL Wrote: [\[CITE\]](#) Good luck with applications. Personally, i wouldn't do this because any decent developer knows that this is not worth the time. Considering you want everything custom. If you find a decent developer to do this for you (basically for free), then god knows you have been blessed.

Custom? So a professional developer copy and pastes and comes up with a website? We want to see your coding skill, not copy and paste skill. And it doesn't have to be something advanced, minimum 2 pages. The rest is up to you, it's basic and shouldn't take you too long.

Hexicidal - January 1, 2015, 11:03 pm

From the bottom of my heart, I hope Titans is successful and I wish you luck.

Programming - January 1, 2015, 11:05 pm

How well must we know JS? I know some, but I can't use it perfectly without googling some.

PM me and I'd like to privately apply.

EDIT: Nevermind, it's just a huge competition. I don't feel like competing for anything.

Hydra - January 1, 2015, 11:07 pm

(Jan 2, 2015 12:05 AM)Programming Wrote: [\[CITE\]](#) How well must we know JS? I know some, but I can't use it perfectly without googling some.

PM me and I'd like to privately apply.

You don't need to be an expert in all of the languages, you just need to know a good enough to edit or code something. Googling is fine, everyone googles when they code.

(Jan 2, 2015 12:05 AM)Programming Wrote: [\[CITE\]](#) EDIT: Nevermind, it's just a huge competition. I don't feel like competing for anything.

Fixed OP, won't be just one "winner" but multiple "winners".

Mittens - January 1, 2015, 11:11 pm

Not qualified completely myself to apply but I would strongly advise looking into the member [Crypto™](#).

Quote:You may not use any templates, framework(Bootstrap, etc.), pre-made stylesheets(CSS/LESS/SASS), pre-made plugins(jQuery/jS), and anything else that is NOT your own work;

I would change it to front-end frameworks instead of frameworks in general. Not allowing the use of

Mithril or other frameworks and the only effects you'll find will be performance decreases.

Hydra - January 1, 2015, 11:16 pm

(Jan 2, 2015 12:11 AM)Mittens Wrote: [\[CITE\]](#) Not qualified completely myself to apply but I would strongly advise looking into the member [Crypto™](#).

Sorry, meant front-end only. Thank you for notifying me.

Apostle - January 1, 2015, 11:18 pm

Everyone should hurry up and apply if you have the skillset, Titans is a great group to be in.

Hydra - January 1, 2015, 11:19 pm

(Jan 2, 2015 12:03 AM)Hexicidal Wrote: [\[CITE\]](#) From the bottom of my heart, I hope Titans is successful and I wish you luck.

Thank you, I hope it succeeds as well. ?

Krew - January 2, 2015, 6:30 am

Lol, did you really just try to use HTML in your thread title?

DevNet - January 2, 2015, 7:13 am

(Jan 2, 2015 07:30 AM)Krew Wrote: [\[CITE\]](#) Lol, did you really just try to use HTML in your thread title?

I'm sure it was put in the title as a pun :)

prada ? - January 2, 2015, 7:25 am

I really suggest you take advantage of this, big projects are in the works and you'll regret it if you're not taking part in it!

DevNet - January 2, 2015, 7:39 am

(Jan 2, 2015 08:25 AM)Prada? Wrote: [\[CITE\]](#) I really suggest you take advantage of this, big projects are in the works and you'll regret it if you're not taking part in it!

It's more like the applicants are taken advantage of. A responsive, full fledged site without any front-end frameworks because OP probably doesn't know you can style them. If I can't even use normalize.css or w/e I'd charge 1k+ for something like this. If multiple real webdevelopers would apply that'd mean they would work for a period without any reward, maybe a membership in a fancy group.

Dragon. - January 2, 2015, 8:00 am

Yeah. Most web developers on HF use Bootstrap and other templates to get their job done. Web designers will likely not apply as a userbar is not worth the amount of time and effort they'll be putting into this.

Regardless, best of luck on your recruitment. I'd be more than happy to do this if there was some monetary compensation for our efforts, and it wasn't a contest.

DevNet - January 2, 2015, 8:04 am

Exactly, and when you fulfil both roles (me) it makes it double the hassle. Not to mention it is also unfair because it's allowed to use PHP frameworks.

Im gone brah - January 2, 2015, 8:14 am

What if the developer is mainly a back-end coder?

(Jan 2, 2015 07:30 AM)Krew Wrote: [\[CITE\]](#) Lol, did you really just try to use HTML in your thread title?

Dumbass, it was his intention since this thread is website related.

Another One - January 2, 2015, 8:15 am

Catchy title.

Goodluck with finding people man.

Froggy - January 2, 2015, 8:25 am

More than one person is being accepted for this. All you have to do is show us that you're skilled.

prada ? - January 2, 2015, 11:42 am

(Jan 2, 2015 08:39 AM)DevNet Wrote: [\[CITE\]](#) It's more like the applicants are taken advantage of. Were not asking them to code a government website here, just a basic page to show they can do it. Group buy-ins go from \$100 and people purchase, this is no different. If you don't want to apply, get off the thread.

Dubjay - January 2, 2015, 1:20 pm

Looking forward to seeing who gets in the group.

Crake - January 2, 2015, 1:26 pm

lol what the hell? You may use external resources for css/js, but not if they're in their own file? Right, how does that make any sense? You WANT a developer who uses resources such as reset stylesheets, javascript libraries, etc effectively without infringing on copyrights.

Hydra - January 2, 2015, 1:33 pm

(Jan 2, 2015 02:26 PM)Crake Wrote: [\[CITE\]](#) lol what the hell? You may use external resources for css/js, but not if they're in their own file? Right, how does that make any sense? Zurb Foundation comes with pre-made stylesheets you can just pick classes out of and make an easy design.

wow.js and animate.css allows you to create transitions and have timed transitions as you scroll down. That is allowed as I did state:

Quote:resources that allow you to do animations or something similar to that.

What doesn't make sense?

Based God Tyrone - January 2, 2015, 2:04 pm

I know a fair bit of HTML/CSS, might have a go.

Roger Waters - January 2, 2015, 2:10 pm

I know a lot of HTML, CSS, and some Javascript. I've been taking a look at PHP and jQuery more and more lately and are the what I've been trying to learn more of.

Sakuto - January 2, 2015, 3:49 pm

"front-end framework(Bootstrap, etc.)" Why the hell aren't we allowed to use this ?

By the way, it's funny to have "html5,css3", modern website and write Flash in the Extra Languages, are you really asking for a Flash Coder on a modern website, new year was 2015, not 1995.

c x y k - January 2, 2015, 3:57 pm

I believe that myself and many others would be capable of producing such work, with ease, but probably won't 'enter', as such, just for the lack of personally achieving anything.

In my honest opinion, I don't see why you stop us from using others' resources. Some people, well - many people, like myself, are better suited and knowledgeable in different areas of web development. I'm more of a backend person myself rather than frontend - simply because I lack creativity.

I think you should allow others to use resources, such as animate.css and bootstrap.css - possibly PHP libraries/frameworks, too. Being a developer doesn't just consist of creating original content 24/7. We're able to create amazing things from others' work, such as bootstrap.

I know bootstrap is frowned upon by many - I also believe that it's too mainstream and doesn't look exactly 'appealing' any more. That's not to say it's not useful though - I use it just for the ease of saving time and the easy column layout. I always use different distributions of it however.

Anyway, point is, I don't think you should stop developers and designers from achieving your goal by limiting them on what they're able to do. I mentioned above, it's not just about creating something, it's how one creates it.

Edit: my mistake. You do allow animate.css, but that's just a small thing.

Anyway, forgot to mention, current layout styles and such can be heavily modified. People can use bootstrap as such to create sites that you wouldn't even think use bootstrap. People could also not use and the site ends up looking as though it uses bootstrap. Flat UI is extremely popular right now, so apart from layout, sites are general not very different.

Hydra - January 2, 2015, 4:01 pm

I want to see what you're capable of doing without a front-end framework. Simple as that.

And Flash is just an extra language, simply optional, the more you know, the better.

c x y k - January 2, 2015, 4:03 pm

People could still achieve the same thing without the frontend pre-styling, it's just extremely useful to save time.

Not many developers like spending hideous amounts of time developing something if it already exists. If I find something online that does just what I want, I generally use it. If something has been created for others use, they should be allowed to use it instead of using up the precious time to just recreate it.

The more you know, the better. That isn't exactly true, either.

It's not difficult. See my previous reply, it's the last post on page four.

Also, there really isn't any skill in using two lines of text to make some word be in a black rectangle and change shade on hover.

kawaii - January 2, 2015, 4:14 pm
Web Developer

Please don't put style tags in your HTML, styling belongs in the CSS. :/

prada ? - January 2, 2015, 4:15 pm
This is a simple, straight-forward task... not sure what the confusion/discussion is about. If people would like to join Titans, prove you can actually code and you're good. What you make isn't going to be used anyway, so that excludes the 'you're just using developers' claim.

c x y k - January 2, 2015, 4:17 pm

HTML and CSS aren't programming languages.

JavaScript and PHP are scripting languages.

From my quick skim over the text, PHP isn't needed. JS is only the really peice of information that one would require a little knowledge on.

Sakuto - January 2, 2015, 4:21 pm

Being able to rewrite some part and use code or class from bootstrap require knowledge. It's not easy and it's not only using someone else style. It's using a fast way to make something without rewrite everything if someone else (in this case twitter) had already do this.

In my honest opinion, your thinking about using library and framework is the perfect thinking of beginner who don't really know what being a developer is.

c x y k - January 2, 2015, 4:24 pm

It's fairly simple to quickly rewrite a little CSS block.

Anybody with a few hours of time on their hands could quite simply create a fully functional static website just by learning simple HTML and CSS.

Hydra - January 2, 2015, 4:25 pm

(Jan 2, 2015 05:17 PM)qonda? Wrote: [\[CITE\]](#) I'm sorry, but being able to write a few hundred single words in CSS doesn't make you 'good' at coding.

No, that's not what i'm implying. I'm saying if i'm free and have the extra time.

Hydra - January 2, 2015, 6:00 pm

Just a tip for anyone who'd like to do this, if you contact me and work with me on this, you'll have a better chance. If I see how you work, how quick and efficient you are, etc., it'll give you a better chance.

based jake - January 2, 2015, 6:19 pm

This group looks awesome!

Wish I knew how to code so I could apply.

ObscureCoder - January 3, 2015, 6:08 am

"You may not use any templates, front-end framework(Bootstrap, etc.), pre-made stylesheets(CSS/LESS/SASS), and anything else that is NOT your own work;" - lol, I can't wait to see people's entries.

(Jan 2, 2015 04:49 PM)Sakuto Wrote: [\[CITE\]](#) "front-end framework(Bootstrap, etc.)" Why the hell aren't we allowed to use this ?

Because if you rely on bootstrap or any other front-end framework, you're not a front-end 'developer'. It's not hard to create a fluid and responsive layout with just CSS.

Sakuto - January 3, 2015, 6:19 am

There's a whole difference between being dependant of something and using something to avoid rewrite everything.

Sakuto - January 3, 2015, 6:28 am

Typical speech of beginner, you prefer doing everything from scratch because blah blah, you are also using only Notepad++ because IDE are shit. And yes, I'm able to do it, I probably know more than you thought. Ever heard of Mobile First, Desktop First ?

Do you even think about applying or you are just here to brag about your knowledge ?

ObscureCoder - January 3, 2015, 6:35 am

(Jan 3, 2015 07:28 AM)Sakuto Wrote: [\[CITE\]](#) Typical speech of beginner, you prefer doing everything from scratch because blah blah, you are also using only Notepad++ because IDE are shit. Do you even think about applying or you are just here to brag about your knowledge ?

Mobile first - you can put all devices first by using fluid and responsive layouts. They're not hard to do in CSS.

No, I came here to answer your question. Also, you wouldn't be 're-writing' anything by not using frameworks since you weren't writing the frameworks in the first place. I'm glad you're able to do it.

EDIT: Sakuto, after this reply, I started making something to prove it doesn't take much time to do something:

Spoiler ([Click to View](#))

Simple site start, no fancy stuff, 25 mins. If you're dedicated, you can do anything with your time if you apply it correctly.

It's fluid, hence the small width image (bad connection - times out for large, full screen images). It's also got a start on mobile without even needing media queries (yet):

All that's needed is to center the navigation, make it auto width and then add a jquery handler for slideToggle(); Media queries will handle hiding and showing stuff between screen sizes + adjusting things here and there.

c x y k - January 3, 2015, 7:37 am

Just curious.

Say I were to write up my own framework as such, would I be able to use that?

I'd assume yes because that's what most people do, they re-use classes on things to save them from re-writing it and then basically create their own, small, dedicated, framework.

c x y k - January 3, 2015, 7:40 am

Within the original post, it states that we're not allowed to copy code however. I haven't ever created my own framework as such, but the idea just came to thought.

Also, would a css reset class be allowed? It doesn't show an skill at all - it's just simple css resetting.

Also, what about fontawesome?

ObscureCoder - January 3, 2015, 7:45 am

Reset css will probably be allowed but it tends to 'reset' elements people don't even end up using so I don't see the point.

Font awesome for icons should be fine I'd image but the icons are generic, check out <http://www.flaticon.com/> amazing site.

Your loss. It's the best icon provider ever.

All the icons I see from font-awesome look so generic in comparison.

Sakuto - January 3, 2015, 10:06 am

Can we please agree about that recruitment being too complicated and not worth the spot at all ? OP, you should recruit people who participate in the debate and close this thread. I'm sure you will find someone who can make your integration without this very long application. Especially because you are "recruiting" with a "example" of our work and then ask to make a fully integration.

We are recruited to make a free job for your group :B Don't you think you are maybe abuse a little of group privilege ?

Stop being ridiculous. Buy-ins for groups are in the \$100 range and we're not the first group to do this. We have had multiple entries so far and we've heard no complaints. As I said before we're not even going to be using the website anyone develops.

Can we please agree that the only people who are complaining are those who are over thinking this recruitment, are dependent on other people's work, and just too lazy to make stuff from scratch.

This exact type of recruitment has been done once or twice in the past and went great, you're just over thinking the situation. And the "free job" you're talking about is the same as how Realizm, Froggy, and I lead a nonprofit group. It's a community forum, you either be greedy and charge for everything(although some situations call for that) or help out and make tutorials and help desks, etc., because you're generous and don't care if you're doing that all for "free".

There is no abuse, are we forcing anyone to do this? Rethink what you're saying because you've got it all mixed up.

I would apply but I'd prefer to know what's actually involved if you do get 'invited'. I made a mock thing to prove to Satuno (or what ever his name is) that using bootstrap doesn't affect the time it takes to make a half-decent site basis. It's in the past pages.

Binder - January 3, 2015, 12:56 pm

You would at least , require a smaller task than a whole website;)

When i was a web designer it used to take me 1 week just to create a website,just 1 page, and even if i were going to do something for someone i wouldn't do 1 week for free.

I think your requirements is too much for the people , yes you would like to see their work and do stuff, but who the heck will do so much just for joining a group?

I am just saying the facts, and even if you don't like to listen them that's fine answell i am just expressing what i think okay.

What you are asking is like an absolute thing , for instance being happy all the time or smile all the time, or working all the time non stop.

What i am trying to say is you have to find a balance, don't ask too much man...
What i would do is that i would ask them just something more simple,than a whole website.

It's not like they don't want to join but it is too much for them.

It's up to you what you gonna do , i ain't no web designer no developer or anything i am just expressing my opinions and you are not obligate to listen to anything i am saying..

It took you 40 hours (5 work days of 8 hours) to create 1 page?

What was it about?

Anyway, I'm not sure why you wouldn't allow people to enter with pre-made work, that should also show the 'skill' you want to see.

The 'simplicity' of this assignment, depends on the amount of time you put into it.
2 to 4 hours of work might be worth it (value wise), but you want to see our skill. I could work on a website for 2 days and it wouldn't show everything I'm capable of.

Let's say I work on a responsive website with just text (pretty much), how would that even be worth it, that'll only take time, not skill.

I probably value my time more than the people who wish to work on this for hours upon hours, but that might be just me.

Not sure who said it, but ~\$100 for an entry into a group seems normal, but this requitement is application based without a buy-in. The work that's put (or can be put) in the website is worth way more than that.

For 2 pages? Shouldn't take you more than 2-3 days. People have been making a full page within 4-8 hours.

It's not that difficult tbh, you're just making the CSS from scratch which will take the most time, the rest is not that hard.

Designer - January 3, 2015, 1:43 pm

One whole page in just 4 to 8 hours. How much do you think our (my) time is worth? If this was a job (I know it isn't, but still) I wouldn't charge \$5 per hour would I?

It shouldn't take 4-8 hours to create a page with just text or w/e, so not sure what those people sent you, but not going into that.

People can still enter with pre-made work though. There wouldn't be a way to notice if it wasn't released somewhere.

Listen, don't take my comments personal. I just don't think you should expect people to work on something for a day for an application as that time should be valued more, but that's my personal opinion. I'll just leave it at this, no harm intended :)

This group isn't some professional web development company. The recruited never stated he specializes in web development or design, he's just a leader of the damn group.

This is for the web development sector - I assume, him having no knowledge of reset css doesn't mean anything at all.

Taking a week for a design is too long, let alone one page.

Realizm - January 4, 2015, 8:25 am

Ah, okay.

As I'm not in the group, I just assumed how it functioned, my mistake.

Anyhow, still proves the point to that other person.

Sakuto - January 4, 2015, 8:39 am

I'm interested in this recruitment, otherwise I would not post that amount of messages to argue, but I've now one big question.

You don't have any sector, but you are recruiting more than one people for this job. So do you project to create a web developpement sector or they are just recruited to make the website and then take part on another sector of the group ? Because if it's only for one job (making the website), why are you recruiting more than one person ? Are we (the potential applicants) going to find our place in your group if we are just web developper ?

Thanks for the answer.

c x y k - January 4, 2015, 8:42 am

Well they're gonna have to know since using frameworks isn't allowed.

Most important things in design (aka what I think should be judged):

- Code structure (not like 5 parents to wrap one thing)
- fluidity (does the site flow well, content wise and layout constraint wise)
- responsive-ness (does the adapt to screen sizes and displays)

I'd assume applicants would understand these well, that's just me though.

If I was judging this, I don't think design would be significant. You may see nice sites by applicants that use bootstrap but if you take away the bootstrap and tell them to remake it, their lack of knowledge and experience really comes into play hence why this is overall a good recruitment task.

Sakuto - January 4, 2015, 10:41 am

(Jan 4, 2015 11:28 AM)Nasyr Wrote: [\[CITE\]](#) He has a valid point, looking at the design it could look good but the code might have been a pain and they don't really know exactly what was done to get it like that.

And you could be the better coder ever but suck in design and have no imagination / creativity. One reason for why this "contest" is irrelevant, you will obviously be judged on design while it's not the objective of this recruitment at all.

Nasyr - January 4, 2015, 10:43 am

I could probably make a few websites to offer tonight but I really can't be bothered if I'm honest. Maybe if I get bored I'll do it, not to be in the group but to keep myself entertained.

ObscureCoder - January 4, 2015, 10:46 am

I do that too, I made this last night while screen-splitting and watching Netflix (keeps my brain active - I can't be doing nothing):

Spoiler [\(Click to View\)](#)

I'm just so bored (probably the reason why I reply to threads that I'm not even involved in). LOL

c x y k - January 4, 2015, 10:55 am

(Jan 4, 2015 11:28 AM)Nasyr Wrote: [\[CITE\]](#) He has a valid point, looking at the design it could look good but the code might have been a pain and they don't really know exactly what was done to get it like that.

He's has basic understanding, although I'm sure that there's others that can evaluate the code behind it - he can evaluate design.

ObscureCoder - January 4, 2015, 10:55 am

(Jan 4, 2015 11:41 AM)Sakuto Wrote: [\[CITE\]](#) And you could be the better coder ever but suck in design and have no imagination / creativity. One reason for why this "contest" is irrelevant, you will obviously be judged on design while it's not the objective of this recruitment at all.

What you've said is nonsense. They're not looking for insanely creative or exotic designs. They want to know you can make a decent site well. I'm assuming you're a 'bootstrap designer' then (aka a person who uses frameworks to save them having to actually do anything creative).

You must find web design a chore. I've been doing web design for 4 years and I still get the nice soothing sanctification feeling every time I do something that I'm satisfied with. If I didn't make things I thought were good - I would've gave this up years ago.

It doesn't matter if you lack creativity. It's not hard to make an OK clean looking site. If you struggle with that, don't call yourself a web designer. If you're looking for inspiration, you'll find it in 20% of the way in.

I agree.

The placeholder box is for a GUI front. Of course it looks like shit - it's a placeholder. It's not meant to be good. It's bullshit stuff I do when I have nothing real to do. I think it's blank and lacks color/depth. The black on black header doesn't help either. The background image for the promo is ghastly.

@Sakuto and @kondax - as a matter of curiosity, does this look better:
Spoiler ([Click to View](#))

It's workable at least. Not great but it's great for entertaining me. Also, if I thought the work I did in my spare time was good - I'd have no spare time.

Different strokes for different folks.

Anyways, for future reference, what exactly don't you not like about it?
It's supposed to be simplistic. Either way, the boxes at the bottom are terrible.
Your feedback is helpful and intriguing. Thanks.

I don't exactly want to derail the thread, sorry.
If you're in need, please pm me.

Hydra - January 4, 2015, 12:26 pm

(Jan 4, 2015 06:10 AM)Sakuto Wrote: [\[CITE\]](#) 1 week for a template is pretty fast. Web design took around 2 or 3 week, we are not talking about little thing. Please don't be rude when you obviously never worked in real life with real constraint...

You all look so beginner, you are all taking about professional thing when you are not even graduated from somewhere. Working in a company for real clients are way more different than working from someone where. And actually I'm afraid of the level of your group if the recruiter don't even know what a reset css is...

If I knew HTML and all the other required languages fluently, we would not be recruiting a web developer. I know a decent amount of HTML and CSS to edit and create something basic but no, I never heard of CSS Reset. I'm not a professional web developer, not sure where you're picking that up from.

'Snorlax - January 4, 2015, 1:04 pm

This explains all you need to know: <http://meyerweb.com/eric/tools/css/reset/>

PHP Code

```
<?php
```

```
html, body, div, span, applet, object, iframe,  
h1, h2, h3, h4, h5, h6, p, blockquote, pre,  
a, abbr, acronym, address, big, cite, code,  
del, dfn, em, img, ins, kbd, q, s, samp,  
small, strike, strong, sub, sup, tt, var,  
b, u, i, center,  
dl, dt, dd, ol, ul, li,  
fieldset, form, label, legend,  
table, caption, tbody, tfoot, thead, tr, th, td,  
article, aside, canvas, details, embed,  
figure, figcaption, footer, header, hgroup,  
menu, nav, output, ruby, section, summary,  
time, mark, audio, video {  
    margin: 0;  
    padding: 0;  
    border: 0;  
    font-size: 100%;  
    font: inherit;  
    vertical-align: baseline;  
}  
/* HTML5 display-role reset for older browsers */  
article, aside, details, figcaption, figure,  
footer, header, hgroup, menu, nav, section {  
    display: block;  
}  
body {  
    line-height: 1;
```

```
}  
ol, ul {  
    list-style: none;  
}  
blockquote, q {  
    quotes: none;  
}  
blockquote:before, blockquote:after,  
q:before, q:after {  
    content: "";  
    content: none;  
}  
table {  
    border-collapse: collapse;  
    border-spacing: 0;  
}
```

Just because you put effort doesn't mean you did good. I can put effort into coding a C++ program, doesn't mean it will be good. Life isn't a guarantee, neither is this. Regular application recruitments consist of minimal effort, this doesn't. There's a reason to why we want to have it this way.

Oh look!

You never put any effort in anything; you ripped a popular Audentio MyBB theme and pasted it into a "custom" theme which you sold. We will not accept your application.

Thread Link: <https://hackforums.net/showthread.php?tid=4132343>

Product Link: <https://www.audentio.com/shop/view/MyBB/neonglow-17>

Demo: <http://www.audentio.com/demo/mybb18/index.php> (Bottom of page, dropdown > select

NeonGlow > press OK to change theme)

c x y k - January 8, 2015, 7:32 am

So... This is closed now, right?

As you said a few days earlier.

Hydra - January 8, 2015, 8:49 am

The final day to submit your website application is Saturday CST.

c x y k - January 8, 2015, 9:32 am

Okay, now that's much better;)

Let's hope it stays this way.

Xorex - January 9, 2015, 6:58 pm

Good luck with this, would've been nice if you allowed Bootstrap. Such a versatile and clean front-end framework.

ObscureCoder - January 9, 2015, 7:12 pm

(Jan 9, 2015 07:58 PM)Xorex Wrote: [\[CITE\]](#) Good luck with this, would've been nice if you allowed Bootstrap. Such a versatile and clean front-end framework.

It's gross and generic. It's overused.

Also, it's too common around beginners to be considered a nice framework (I don't use frameworks but I guess if you're creating a very, very large project it'd be useful to make your own).

That's just my opinion though.

Sakuto - January 11, 2015, 6:32 am

So, contest is finish now, can we see the production of the winners ?

Programming - January 11, 2015, 10:43 am

(Jan 11, 2015 07:32 AM)Sakuto Wrote: [\[CITE\]](#) So, contest is finish now, can we see the production of the winners ?

Give them time, everyone must decide. Even though I think only around 4 people applied; give them a break.

Hydra - January 11, 2015, 11:07 am

Thank you all for applying. Give us a few days to look through the websites and have a vote for each entry. This thread will be opened back up when we have the final decisions and the applicants will be contacted through private message.
