Thread: [Reverse engineer alt generators?](#)

SIM-2059193 - January 1, 2015, 3:01 pm

I dont know if its rumor or not but on here i heard a few people say you would be able to wireshark or something connections to an online alt generator and then be able to find their lists, something like that

ex; example.com/mcgen.php has the generator, but how would i be able to find the url of where the alts are stored? is there any way?

Hunting Rifle - January 1, 2015, 3:02 pm

Send me the program and I'll get it for you.

It isnt a program its php on a website

Would that make a difference?

So the account generator is in the website?, if its poorly coded you can just inspect element and it might have a API attached to the button or something

I attempted that and found nothing to help.

Yes, it does.

If it was a program it would make connections that you could see but if it is done with php on a server it's all handled by the server and you can't check the connection.

ProtectNull™ - January 1, 2015, 3:07 pm

Can i have the link to it? if this is a members website though. Don't pm me the site lol
