HF Giveaway Tool

Introduction

It picks a random user, added in the settings, its just a simple tool i came up with, in my aspect its pretty cool but i created it so what do you guys think?

Picture

FeaturesUp To 12 Users

Member Friendly

Add Members/Remove Members

Ban/Unban Members

Ban Checking (Silent)

Note: Turning on ban check will be a silent process, upon it detecting if a user is banned it will remove them completely unless you take them off the list, this is good if you have a big giveaway with alot of people

Hiiro - January 1, 2015, 9:30 pm

Why is it only up to 12 users?

Wouldn't it be just as easy to have unlimited users?

Zettabit - January 1, 2015, 9:34 pm

Your applications are getting more and more pointless. "Up to 12 users" - why not just use a listbox and create a function that adds a user to the listbox? For your user selection, just use `Random.Next(1, ListBox.Items.Count)`

Negativity? You've been in this section for the past week posting bullshit, not including credits, C+P'ing shit and taking credit for shit you didn't make.

Rhez - January 1, 2015, 9:41 pm

Use Listbox not TextBox bruh.

So it will pick user as many as it can.

MySettingsProperty.Settings.u12 = ""
MySettingsProperty.Settings.Save()
Me.checkBan.[Stop]()
End If
```

You're doing all this in a tick event? Holy hell.
for the checkBan because i dont know any other way to do so :(

Just by reading these comments I see what kind of programmer you are.
p.s. sorry for the offtopic.

Entire - January 1, 2015, 9:46 pm

Although it is pointless as fuck when you could use random.org for post count, I like the theme.

A ? ? ? ? ? - January 2, 2015, 3:57 am

ahh?

what is the actual use of this application ??

Autocorrect - January 2, 2015, 4:00 am

I could use this

OR

I could use random.org and save myself an hour manually entering usernames

You'd be better off with something that would automatically grab UID's and post numbers from each page

Then delete duplicates and generate a random post number with the assigned UID as winner

Boom, completely autopilot giveaway

+Haze - January 2, 2015, 4:06 am

That's what I was thinking, that would be so much easier and better. I could create such a thing, not sure if admins would allow it though.

If i recall correctly, any tool that 'auto-mates' hackforums is disallowed. I do believe because this is automatically collecting all UID's, it is classified as automation, and there for falls under the no go flag.

yep that's true , ldb. once made a hf Client but as it was disallowed he dropped his project.
