Has been tested on the following so far, keep in mind that it will work with pretty much everything

that is not .NET

Dark Comet

Cerberus

DaRKDDoSeR

Host Booter XR

Solitude

CyberGate

Andromeda

IP Killer

Netwire RAT

BlackShades

Athena

BitBot

Betabot

Athena HTTP

Fenix IRC Bot - New!

Better yet it will work on everything but files that require EOF!

HWID changes are \$5. (Does not apply for 1 week subscriptions)

Stubs are currently using a Delphi as the wrapper for the C++ shellcode, stubs will change back to strictly C++ again soon.

Support for 1 week subscriptions is nonexistent

Huge Vouch for Absolute Crypter!

First of all this crypter have the best support ive ever seen on Hackforums. You get instant answers from marvid on skype.

And ofcourse the crypter works as advertised and gets refud-ed in 24hours of the first detection. This is absolutely the best crypter on hackforums! ?

If you're in need of a trustworthy crypter do not hesitate, buy this while you still can!

Okay so this guy.. this guy is the is freakin awesome.

This post cannot express how much I vouch for this crypter!

I've bought the crypter, only a 1 week subscription which means I do not need to even get support help as stated on the thread?, I've encountered issues as a result of my 0 experience with crypters. This fucking guy, not only PMed around 15 messages conversation with me to help he personally listened and tried to guide me step by step towards solving my problems.

Afterall the problem wasn't solve! So he added me on Skype and helped me via Teamviewer and no, he didn't close the conversation after he solve the problem in 20 seconds, he was patient with me and explained what was I doing wrong and how to avoid future issues. REMEMBER : I should not have gotten any help from the start! "Support for 1 week subscriptions is nonexistent".

This crypter is amazing 100% 0/35 FUD, simple, cool, quickly updated and well programmed, I recommend everyone who wants the best low priced crypter buying this one because it is absolutely perfect!

It's C++ not .NET it uses self inject by default.

Yes it works with steam stealer.

Hello guys I released an update to make the crypter automatically select the stub instead of you browsing the stub so enjoy and enjoy the slight improvements to the GUI.

Big vouch! Here's a little review for everyone thinking of buying. ?

Crypting:

I've tried this crypter with DarkComet RAT, Prototype RAT, and Swarm IRC bot. All of the them worked flawlessly and I didn't really see a delay in execution.

Binder:

I've binded the 3 things mentioned above with a couple different installers. All worked flawlessly and came out FUD.

File Cloner:

Works like a charm, nothing more to say here.

Scanner:

Always works, never fails unless the file is to big, and that is due to scan4you's file size limit. Very great addition to the crypter. I love the fact that I don't have to pay for scanning.

FUD times:

The updater works great and the FUD times are excellent. Updates always come out quickly after a detection.

Experience:

I think MARVID's reputation speaks for itself. Do not hesitate to buy this crypter.

Error, is caused by firefox when you download a .rar from a direct link as it tries to read it rather then download it. Has nothing to do with my site.

Fix = Don't use firefox.

Oh how I love stupid ass little kids like yourself.

Do you not know how to count time? Let's see the time stamp of your pm with the proper information I request. <http://prntscr.com/5zkl52>

Does that seem like almost 3 days? No more like 12 hours sit the fuck down and wait like everyone I have a life. I am not on the computer all the time.

Also there is a tracking feature I recommend you use it.

Marvid is legit guys. I've been his customer for almost a year. He always get backs to you. It may not be instantly but he does get back to you. I've noticed he checks HF at least 2 times a day. Sometimes around 11am-2pm and second time around 5-8pm he's probably busy with a lot of stuff so be happy. Some sellers don't check consistently like him.

Design 9/10

I enjoyed the dark scheme as it fitted the crypter very nicely.

Smoothness 9/10

This program is really smooth.

Crypter 9/10

The crypter actually works and did make my file fud.

Abilities 9/10

lots of abilities. awesome.

Final Overview 9/10

This is the average when I add up all of the ratings out of 40.

The title says ten because it is ten. If you don't have the mental intellectuality read correctly or bother to click on the thread, simply don't post. You would know that subscriptions start at \$10 if you read, therefor, I am not misleading nor deceiving anyone.

Thanks.

Got paid 10 april he said i wont get the product.

I ask for refund he said he will be ok in end of month.

Tomorrow i talk to him and he scam me 26\$

Well you loose me and my customers; not sure he was best solution

You should go to some other cryptor seller which are more serious.

If interested i can show over teamviewer history log

You should go to some other cryptor seller which are more serious.

If interested i can show over teamviewer history log

1. You paid with a an echeck on the 10th of April and you wanted me to activate you before the payment even had cleared.
2. When your payment cleared on the 27th of April, you refused to pm as instructed. After clearly being told what to do.
3. You opened a dispute for the payment. And you expect me to be chill about it.

It's simple you did not get the crypter because of your OWN stupidity. One you disputed when the check finally cleared and you refused to pm me as instructed for activation. I had my rules set before you or anyone bought my software. Its not my responsibility to make you read. Like you do notice how many people have vouched they got the product correct?

So yes please show everyone and anyone who wishes to see the history log please do show them it. They will read when I directed you on exactly on what to do.

PS : I been selling for years. If I were truly a scammer there would be more people bitching on my thread over the years no? Please do notice how stupid you sound.

@everyone else

Enjoy like always!

As i see its one of the robust crypters on hf, but How long it stays fud against nod32? I mean the period from refud till be detected again by nod32 .

Wish you good sells

I would love to go for the \$10 plan..how do I pay with perfect money ?

slawist - May 15, 2015, 2:46 pm

Eventually and after long investigation on true native crypters I have bought this Absolute Crypter. Yes, it deserves the purchase because I will be able to crypt almost any type of files, and thanks to adding .net support.

Furthermore, the long period of being FUD is another thing that attracted me to this crypter, but the more valuable thing that made me to really decide to buy it is the owner/creator who is very kind and very well takes buyer's consideration into account.

Go ahead and keep this beautiful crypter alive for ever.

All the best

Anyways,

big file = big output.

1. You paid yesterday. Not two days ago I could post pic of the pm when you paid.

2. Normal people work, how is not normal if I don't reply until I get back home?

3. This is the MOST important one. You are AN UPGRADED user there is the TRACKING feature there for a REASON. So shame on you for assuming or even thinking I am on a scamming spree. Especially when not even when your original claim is false to begin with.

The tracking system is the reason i thought something fishy was going on. I get your pm with btc address. I pay and within 30 seconds reply. You never read.

My bad for assuming you were scamming people but other people were waiting for the crypter too.

Thanks for your vouch bud, I am glad you are you enjoy Absolute for the past months. Of course it can not be always FUD as that is impossible a car can not be always full on gas if its in use. Same thing applies with Absolute or any crypter for that matter. I try to release timely updates within hours of detects as you know. Enjoy bud.

Hi, MARVID, i have a few questions and hope that you will answer them.

- 1) Does this work on unicode systems (russian, chinese, etc.)?
- 2) Does this use runPE? I can see one option to inject into iexplore.exe, if not checked does it use self-inject?
- 3) Does it have anti-memory scan against av's like nod32?
- 4) What are the average fud times? I have seen that you refund very fast, however what interests me the most is the fud time between your refunds.

Thank you in advance.

1. Of course it does. No crypter should be sold otherwise.
2. Absolute uses runpe and it's self inject by default.
3. Yes.
4. FUD time varies with every single update. I wouldn't say there is an average. However as you said I update fast hence no one complains on my thread unlike every other crypter thread in the market :D With that being said I have private stubs available resulting in long FUD . ?

Just wanted to know, why the output of your crypter is 1mb+? Even for Delphi it's big no? Anyway you advertise as C++, you should change this while it's not.

Ugh lets see if you add the stub plus a file thats a certain size you get 1mb+ output. Common sense there. I wonder what made you think otherwise. ?

Anyways, I believe you had the crypter a while back if I am not mistaken could be, however if I'm right you should be aware of the size of the stubs more or less.

Furthermore here is a scan just for you that is not a 1mb+. See what happens when we don't crypt I big file? :D

Alright, i was just asking myself why crypting a big file for your scans, i prefer crypting small so people see the average size of stub in scans :P

And for your stub for the moment it is Delphi or C++?

I scan the multiple files before release an update to ensure it will FUD with multiple files with varies sizes and the last file I usually scan are big.

Hence the scan.

And Delphi is just the wrapper at the moment as stated on the thread.

I've got a few questions;

1. Is this crypter working perfectly with LL?

3. How long is the FUD time?

Thanks!

1. It's working just fine with LL.
2. I update when there the need to. As you can see pretty much no one complains about my crypter not being FUD, thats because I update.
3. I can't honestly answer that it depends how and many users use the specific update.

Of course the crypter works it has been around for almost 3 years. I would guess more then one person would bitch about it not working don't you think?

I'm tired waiting to obtain wonderful prestations of crypters.
Very often was not posible apply those wonderful prestations
in server because will be a sure detection.

Sometimes find a SIMPLE ENCRYPT TOOL, without a tons of prestations
"ABSOLUTE" simple, "ABSOLUTE" fast, "ABSOLUTE" effective, few clicks optain the
desired "magic", and of course, fully effective.
(tested with .net dependent and not .net dependent).

I don't know how strong will be this fud, but at the first time your
tool is FORMIDABLE.

On a first look, the encrypted server is heavy, but is a very
little problem, "ABSOLUTE" compensated for the incredible result.

CONGRATULATIONS i re-new my licence.... SURE.

Maybe you should start by posting the correct thread. This is not a cloud crypter, with that being said private is available which works great with betabot.

When you are testing against AVG i suggest you use a more known malware that has more functions, because AVG does behaviour analysis runtime hooking different APIs. So i would suggest DC, NetWire etc..

Also always use startup and reboot the machine..

AVG is easy to bypass but you should show with startup enabled + reboot... Because startup is the only thing AVG is good on...

Without showing that, these tests are useless...

Startup is enabled, this was just an update. Showing its still FUD on runtime. If you want to look at the main thread. I have it bypassing AVG, Kasper, with DC.

Crypter has been around for years and thats for a reason. When I have free time I will do it again. Just to please your little ass. ? In the mean time take your nonsense to another thread, please.

Of course, haha Windows defender is extremely easy. As for FUD time an honest answer is that it all depends how much my costumers decide to use the stub for that certain update. ?

Purchased a couple of days ago! Here is my review:

Crypter Quality 10/10

There was no problem, not a single error while Crypting the file I wanted. There was tip messages just before after pressing the Crypt button saying that it is suggested to use an .ico and better Assembly next time I Crypt. So that helped instantly by reminding me to use .ico and change the Assembly as well (Shit happens some time :P).

AV Scanner 9/10

I give 9 because I believe there are more than 40 AV's out there. But I was very happy on getting 0/40 on my Crypted file!

Support 10/10

Marvid spent countless hours on Skype with me navigating me on how to create a quality Crypted file (Yes I am newbie) and also he helped me setup my RAT.

Thank you so much for all your support and this wonderful Crypter I definitely recommended it anyone Expert User or non! Marvid will solve any issues!

Crypter Quality 10/10

There was no problem, not a single error while Crypting the file I wanted. There was tip messages just before after pressing the Crypt button saying that it is suggested to use an .ico and better Assembly next time I Crypt. So that helped instantly by reminding me to use .ico and change the Assembly as well (Shit happens some time :P).

AV Scanner 9/10

I give 9 because I believe there are more than 40 AV's out there. But I was very happy on getting 0/40 on my Crypted file!

Support 10/10

Marvid spent countless hours on Skype with me navigating me on how to create a quality Crypted file (Yes I am newbie) and also he helped me setup my RAT.

Thank you so much for all your support and this wonderful Crypter I definitely recommended it anyone Expert User or non! Marvid will solve any issues!

Amazing vouch cheers bud. :D

You are joking, any costumer of mine will vouch it works for Windows 7. Take your ignorance else where. I'll make a video just to shut you up.

You don't even own Absolute Crypter.

titoum76 - March 28, 2016, 10:36 am

Better crypter on HF !!! Coded in C++ so no this .NET fucking dependencies !
Very good support, always available for help.

Scantime : 100% FUD (0/42)
Runtime : I test on : AVG/Avast/BitDefender/McAfee/Kaspersky/360 Antivirus and all bypass ! Just perfect ! 100% RUNTIME Score with me at the moment.

Buy this crypter, if you want a scan/runtime fud, get it now.

I have test Absolute Crypter, Buzz Crypter & Protec#ion.

Absolute : 10/10
Buzz Crypter : 9/10 Often 100% FUD SCAN/RUNTIME and the better feature on HF, the best persistance.
Protec#ion : Good crypter but not very stable, not 100% FUD Scantime but Bypass many AV runtime.

Conclusion : I advise you to buy Absolute or Buzz, but me I prefer Absolute.
